# Progress report on adoption of the Basel regulatory framework

## Introduction

In 2012, the Basel Committee on Banking Supervision (BCBS) started the Regulatory Consistency Assessment Programme (RCAP) to monitor progress in introducing domestic regulations, assessing their consistency and analysing regulatory outcomes.<sup>1</sup> As part of this programme, the Committee periodically monitors the adoption of Basel standards. The monitoring initially focused on the Basel risk-based capital requirements, and has since expanded to cover all Basel standards. These include the finalised Basel III post-crisis reforms published by the Committee in December 2017, which will take effect on 1 January 2023 and will be phased in over five years.<sup>2</sup> The Group of Central Bank Governors and Heads of Supervision, the oversight body of the BCBS, has consistently reaffirmed its expectation of full, timely and consistent implementation of all elements of these reforms.<sup>3</sup>

This report sets out the adoption status of Basel III standards for each of the BCBS member jurisdictions as of end-May 2020.<sup>4</sup> It updates the Committee's previous progress reports, which have been published semiannually since October 2011.<sup>5</sup>

As of end-May 2020, all 27 member jurisdictions have risk-based capital rules, Liquidity Coverage Ratio (LCR) regulations and capital conservation buffers in force. Twenty-six member jurisdictions have final rules in force for the countercyclical capital buffer and the leverage ratio based on the existing (2014) exposure definition. Twenty-five member jurisdictions have final rules in force for the domestic systemically important bank (D-SIB) requirement. With regard to the global systemically important bank (G-SIB) requirements, all members that are home jurisdictions to G-SIBs have final rules in force. Some 21 member jurisdictions have issued final rules for the revised securitisation framework, and 19 member jurisdictions have final rules in place for capital requirements for equity investments in funds. Moreover, all of the 27 member jurisdictions have issued draft or final rules for the Net Stable Funding Ratio (NSFR).

Since the previous report, published in October 2019, member jurisdictions have made further progress in implementing standards whose deadlines have passed, despite financial stability priorities related to the Covid-19 pandemic. Twenty-one member jurisdictions have issued final rules for the capital requirements for bank exposures to central counterparties (CCPs) and standard on interest rate risk in the banking book (IRRBB), and 23 have issued final rules for the standardised approach for measuring counterparty credit risk exposures (SA-CCR). Moreover, 22 member jurisdictions have issued draft or final rules for the requirements for total loss-absorbing capacity (TLAC) holdings, and 26 have issued draft or final rules for the large exposure (LEX) framework.

Progress has also been made in implementing rules that are yet to come into effect. Some 14

<sup>1</sup> For more details of the RCAP, see [www.bis.org/bcbs/implementation.htm](http://www.bis.org/bcbs/implementation.htm).

<sup>2</sup> In March 2020, the Group of Central Bank Governors and Heads of Supervision endorsed a set of measures to provide additional operational capacity for banks and supervisors to respond to the financial stability priorities resulting from the impact of Covid-19 on the global banking system. According to the endorsement, the implementation date of the Basel III standards finalised in December 2017 has been deferred by one year to 1 January 2023 (see [www.bis.org/press/p200327.htm](http://www.bis.org/press/p200327.htm)).

<sup>3</sup> See [www.bis.org/press/p171207.htm](http://www.bis.org/press/p171207.htm).

<sup>4</sup> Draft or final rules published and reported by member jurisdictions between end-May 2020 and the publication of this report may be also taken into account.

<sup>5</sup> For previous progress reports, see [www.bis.org/bcbs/implementation/rcap\\_reports.htm](http://www.bis.org/bcbs/implementation/rcap_reports.htm). Member jurisdictions are responsible for implementing the Basel standards within the time frame established by the Committee, and they both undergo and participate in assessments of the consistency of domestic rules and supervisory practices in relation to the Basel standards (see the Basel Committee Charter, [www.bis.org/bcbs/charter.htm](http://www.bis.org/bcbs/charter.htm)).

member jurisdictions have issued draft or final rules for the leverage ratio based on the revised (2017) exposure definition. One member jurisdiction has final rules in place for the revised standardised approach for credit risk. Two member jurisdictions have final rules in paces for the revised IRB approach for credit risk and the revised operational risk framework. Moreover, nine member jurisdictions have issued final rules for the revised minimum requirements for market risk.

Table 1 below summarises the progress made in implementing the Basel standards since the last progress report was published.

**Table 1: Member jurisdictions that have issued final rules**

<b>Standard</b>	<b>Number of jurisdictions as of end-September 2019</b>	<b>Number of jurisdictions as of end-May 2020</b>

While the Committee welcomes the overall progress made on the implementation of standards by member jurisdictions, it reaffirms its expectation of full, timely and consistent implementation of the Basel III post-crisis reforms and will continue monitoring closely the implementation of these reforms.

Regarding the *consistency of regulatory implementation*, the Committee has published since 2012 its assessment reports on all 27 members regarding their implementation of Basel risk-based capital and LCR standards. Further, the Committee published in June 2016 its assessment reports on the implementation of the Basel G-SIB framework in the five jurisdictions that were home to G-SIBs.

In 2018, the Committee started assessing the consistency of implementation of the NSFR and the LEX framework. As of end-May 2020, reviews of the implementation of these standards in Argentina, Australia, Brazil, Canada, China, Hong Kong SAR, India, Indonesia, Saudi Arabia and Singapore have been completed and the reports published.<sup>6</sup> Overall, the NSFR regulations and the LEX framework in these jurisdictions were found to be “compliant” with the Basel standards. To free up operational capacity for banks and supervisors as they respond to the impact of the Covid-19 pandemic, the Committee suspended in March 2020 all outstanding jurisdictional assessments planned in 2020 under the RCAP. The Committee plans to complete its review of the implementation of the NSFR and the LEX framework for all member

<sup>6</sup> All jurisdictional reports are available at [www.bis.org/bcbs/implementation/rcap\\_jurisdictional.htm](http://www.bis.org/bcbs/implementation/rcap_jurisdictional.htm).

jurisdictions by mid-2022.

Regarding the analysis of *consistency of regulatory outcomes*, the Committee has published five reports on the regulatory consistency of risk-weighted assets in the banking book and in the trading book.<sup>7</sup> Since then, the focus of the Committee's analysis has been on evaluating the impact of Basel III reforms both on the resilience of the banking system and broader financial activity.

## Status of adoption of Basel standards

### Scope

This report is designed to monitor the adoption progress of all Basel standards agreed to date. The monitoring tables include all standards currently in the course of implementation in BCBS member jurisdictions. This means that, in contrast to earlier reports, it no longer includes the Basel II and 2.5 standards, nor those Basel III standards that have been implemented by all BCBS members (definition of capital, capital conservation buffer and LCR). The attached table therefore reviews members' regulatory adoption of the following standards.

- The following aspects of the *risk-based capital* standards that are still being implemented:
  - Countercyclical buffer: the countercyclical buffer became fully effective on 1 January 2019 after being phased in parallel to the capital conservation buffer between 1 January 2016 and year-end 2018.
  - Margin requirements for non-centrally cleared derivatives: these requirements, most recently updated in March 2015, are being phased in between 1 September 2016 and 31 August 2022.<sup>8</sup>
  - Capital requirements for bank exposures to central counterparties: in April 2014, the Committee issued the final standard for the capital treatment of bank exposures to CCPs. These came into effect on 1 January 2017.
  - Capital requirements for equity investment in funds: in December 2013, the Committee issued the final standard for the treatment of banks' investments in the equity of funds that are held in the banking book, which took effect from 1 January 2017.
  - The standardised approach for measuring counterparty credit risk exposure: in March 2014, the Committee issued the final standard on SA-CCR, which took effect on 1 January 2017. It replaced both the Current Exposure Method (CEM) and the Standardised Method (SM) in the capital adequacy framework, while the Internal Model Method (IMM) shortcut method is eliminated from the framework.
  - Securitisation framework: the Committee issued revisions to the securitisation framework in December 2014 and July 2016 to strengthen the capital standards for securitisation exposures held in the banking book, which came into effect on 1 January 2018.
  - TLAC holdings: the TLAC holdings standard was issued by the Committee in October 2016. It applies to all banks and describes the prudential treatment for holdings

<sup>7</sup> Reports are available at [www.bis.org/bcbs/implementation/rcap\\_thematic.htm](http://www.bis.org/bcbs/implementation/rcap_thematic.htm).

<sup>8</sup> In April 2020, the BCBS and the International Organization of Securities Commission (IOSCO) agreed to extend the deadline for completing the implementation phases of the margin requirements for non-centrally cleared derivatives by one year. With this extension, the final implementation phase will take place on 1 September 2022, instead of 1 September 2021. See [www.bis.org/press/p200403a.htm](http://www.bis.org/press/p200403a.htm).

of instruments that comprise TLAC for the issuing G-SIB. The standard took effect from 1 January 2019.

- Finalised reforms to the risk-based capital framework: in December 2017, the Committee issued the finalised Basel III post-crisis reforms, which will take effect from January 2023 and include the following aspects of the risk-based capital framework:
  - Revised standardised approach for credit risk.
  - Revised internal ratings-based (IRB) approach for credit risk.
  - Revised credit valuation adjustment (CVA) framework.
  - Revised minimum capital requirements for market risk: the Committee published in January 2019 a set of revisions to the market risk framework, which will also take effect as of January 2023.
  - Revised operational risk framework.
  - Output floor: the Committee replaced the existing Basel II floor with a floor based on the revised Basel III standardised approaches. This revised output floor is to be phased in between 1 January 2023 and end-2027, becoming fully effective on 1 January 2028.
- The following aspects of the *Basel III leverage ratio* are still being implemented:
  - Leverage ratio based on the existing (2014) exposure definition: in January 2014, the Committee issued the Basel III leverage ratio framework and disclosure requirements. Implementation of the leverage ratio requirements came into effect on 1 January 2018, while public disclosure started on 1 January 2015.
  - Leverage ratio based on the revised (2017) exposure definition: in December 2017, the Committee issued the revised leverage ratio framework with revisions to its exposure measure, which will come into effect on 1 January 2023.
- The following aspects of the *liquidity* requirements are still being implemented:
  - Monitoring tools for intraday liquidity management: this standard was developed in consultation with the Committee on Payment and Settlement Systems (now the Committee on Payments and Market Infrastructures) to enable banking supervisors to better monitor a bank's management of intraday liquidity risk and ability to meet payment and settlement obligations on a timely basis. The reporting of the monitoring tools commenced on a monthly basis from 1 January 2015 to coincide with the implementation of the LCR reporting requirements.
  - Basel III Net Stable Funding Ratio: in October 2014, the Basel Committee issued the final standard for the NSFR. In line with the timeline specified in the 2010 publication of the liquidity risk framework, the NSFR became a minimum standard on 1 January 2018.
- The following aspects of the requirements for *systemically important banks (SIBs)* are still being implemented:
  - G-SIB framework: in July 2013, the Committee published an updated framework for the assessment methodology and higher loss absorbency requirements for G-SIBs. The requirements came into effect on 1 January 2016 and became fully effective on 1 January 2019. In July 2018, the Committee published a further updated framework, which is expected to be implemented by 2021.<sup>9</sup>

<sup>9</sup> Future progress reports will consider monitoring the implementation status of these revisions.

- D-SIB framework: in October 2012, the Committee issued a set of principles on the assessment methodology and the higher loss absorbency requirement for D-SIBs. Given that the D-SIB framework complements the G-SIB framework, the Committee believes it would be appropriate if banks identified as D-SIBs by their national authorities were required to comply with the principles in line with the phase-in arrangements for the G-SIB framework, ie from January 2016.
- Leverage ratio buffer: in December 2017, the Committee issued the revised leverage ratio framework and introduced a leverage ratio buffer for G-SIBs. The buffer requirement will come into effect on 1 January 2023.
- *Interest rate risk in the banking book*: in April 2016, the Committee issued the final standard for IRRBB, which came into effect from end-2018.
- *Supervisory framework for measuring and controlling large exposures*: in April 2014, the Committee issued the final standard that sets out a supervisory framework for measuring and controlling large exposures, which took effect on 1 January 2019.
- *Pillar 3 disclosure requirements*: in January 2015, the Basel Committee issued revised Pillar 3 disclosure requirements, which took effect from end-2016 (ie banks are required to publish their first Pillar 3 report under the revised framework concurrently with their end-2016 financial report). In March 2017, the Committee published standards developed during the second phase of its review of the Pillar 3 disclosure framework, building on the revisions published in 2015 and consolidating and enhancing other disclosures. These requirements take effect between 2017 and 2019 (except for market risk, for which the implementation and regulatory reporting date is 1 January 2023). In December 2018, the Committee published standards developed during the third phase of its review of the Pillar 3 disclosure framework. These requirements will take effect between 2020 and 2023.

## Methodology

The information contained in the following tables is based on responses from Basel Committee member jurisdictions, and reports the status as of end-May 2020.

The following classification is used for the adoption status of Basel regulatory rules:

1. *Draft regulation not published*: no draft law, regulation or other official document has been made public to detail the planned content of the domestic regulatory rules. This status includes cases where a jurisdiction has communicated high-level information about its implementation plans, but not detailed rules.
2. *Draft regulation published*: a draft law, regulation or other official document is already publicly available – for example, for public consultation or legislative deliberations. The content of the document has to be specific enough to be implemented when adopted.
3. *Final rule published*: the domestic legal or regulatory framework has been finalised and approved, but is still not implemented by banks.
4. *Final rule in force*: the domestic legal and regulatory framework has been published and is implemented by banks.

In order to support and supplement the status reported, summary information about the next steps and the adoption plans being considered is also provided for each jurisdiction.<sup>10</sup>

In addition to the status classification, a colour code is used to indicate the adoption status of

<sup>10</sup> Links to domestic implementation documents are available at [www.bis.org/publ/bcbs/b3prog\\_dom\\_impl.htm](http://www.bis.org/publ/bcbs/b3prog_dom_impl.htm).

each jurisdiction: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable. The colour code is used for those Basel components for which the agreed adoption deadline has passed.

A standard is deemed to be adopted and implemented only when the numerical code is 4 *and* the colour code is green.

## Overview of implementation

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks); and \* = implementation status mixed (please refer to the progress monitoring report).

Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable.

## Implementation in Australia

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks). Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable.

	Basel standards	BCBS deadline	Status	Remarks
<b>Capital</b>	Countercyclical capital buffer (CCyB)	Jan 2016	4	Final rule published on 28 September 2012 and in force from 1 January 2016.

<b>Capital</b>	Countercyclical capital buffer (CCyB)	Jan 2016	4	The final rule published on 7 April 2016 and in force from 8 April 2016.
	Margin requirements for non-centrally cleared derivatives	Sep 2016	2	Draft regulation was published in May 2019. The final rule is expected to be published by the central bank during 2020. Based on average notional amounts of non-centrally cleared derivatives, covered entities subject to Mexican regulation would be required to exchange initial margin requirements by 2020, according to the transitional arrangements under the international standard.
	Capital requirements for CCPs	Jan 2017	1	The publication of the final rule was postponed due to the Covid-19 pandemic.
	Capital requirements for equity investments in funds	Jan 2017	4,1	Current regulation requires equity investments in funds to be decomposed in their underlying assets and capital requirements are determined accordingly, in a similar way as required by the Look-through Approach. For certain investments in which it is not possible to decompose its underlying assets, a risk weight of 1250% applies.  As current regulation is a partial adoption of the standard, a draft will be published for consultation during 2020. Nevertheless, the publication of the final rule will be postponed due to the Covid-19 pandemic.
	SA-CCR	Jan 2017	1	The draft will be published for consultation during 2020. Nevertheless, the publication of final rule was postponed due to the Covid-19 pandemic.
	Securitisation framework	Jan 2018	1	The draft will be published for consultation during 2020. Nevertheless, the publication of the final rule will be postponed due to the Covid-19 pandemic.

<b>SIB</b>	G-SIB requirements	Jan 2016	na	Mexico is not home to a G-SIB.
	D-SIB requirements	Jan 2016	4	The final rule was published on 31 December 2015 and in force from 30 April 2016.
	Leverage ratio buffer	Jan 2023	na	Mexico is not home to a G-SIB.
<b>IRRBB</b>	Interest rate risk in the banking book	2018	4,1	The current regulation sets forth that banks must manage the IRRBB as if they were trading bank positions and sets Pillar I capital requirements accordingly. Under this rule, the IRRBB must be managed by banks complying with a framework that includes at least an exposure limits' definition according to risk appetite; governing bodies for monitoring the risk management framework's compliance; independent periodic assessments on the risk management framework's implementation; interest rates stress tests; use of models that generate reliable results; periodic disclosure; and periodic capital adequacy assessment.  The rule is being updated to complement the principles established in the framework of IRRBB issued by the BCBS. The publication of the updated rule will be postponed due to the crisis generated by Covid-19.
<b>Liquidity</b>	Monitoring tools for intraday liquidity management	Jan 2015	na	Currently, the central bank receives all the necessary information to compute 4 indicators. The computation of the remaining 3 requires additional data requirements, but collection of such data will be postponed until the shock of the Covid-19 pandemic is overcome. At this stage, we do not foresee the need to issue a specific regulation, as Banco de Mexico already gathers the necessary information and could request additional data, if needed.
	Net Stable Funding Ratio (NSFR)	Jan 2018	2	The official draft was published for consultation on March 16, 2020. In accordance with the regulatory process, the final rule was expected to be published in 2Q 2020. However, due to the Covid-19 pandemic the entry into force of this requirement has been postponed to avoid overloading the institutions during this episode of stress. The authorities will evaluate the evolution of the situation and determine the date of entry into force of this

				requirement. While there is no final rule published, since 2017 banks report, on a monthly basis, all the necessary data to compute the NSFR, as well as preliminary calculations of the NSFR. To complete the data templates and calculations, banks follow instructions provided by the central bank, which reflect, to a very large extent, the content of the regulation being prepared. To date, all banks comply with the NSFR at 100%.
<b>Large exposures</b>	Supervisory framework for measuring and controlling large exposures	Jan 2019	1	<p>The draft for its implementation is in process to be published for consultation. The publication of the final rule was postponed due to the Covid-19 pandemic. The current rules for measuring and controlling large exposures establish that banks must comply with maximum concentration limits per common risk group, depending on their Tier 1 Ratio. The concept of common risk considers that parties belong to the same common risk group if they are persons (natural or legal persons) who are depending economically on each other, being controlled by a same counterparty, or controlling a same counterparty. In addition, parties are deemed to represent common risk if they act in a coordinated way due to specific family ties, exercise "administrative" power upon a counterparty, or be able to impose decisions or to nominate the majority of the Board of a counterparty.</p> <p>The maximum concentrations limits range from 40% to 12% of their Tier 1 capital depending on the level of their Tier 1 Ratio.</p>
<b>Disclosure</b>	Revised Pillar 3 requirements (published 2015)	Dec 2016	4, 1	<p>The disclosure requirements for Leverage Ratio, Liquidity Coverage Ratio, some aspects of Capitalisation, Credit Risk, Market Risk, Securitisation and Remuneration are in force, in line with the adoptions for these frameworks. The missing revised Pillar 3 requirements will be issued as the implementations will be carried out on the dates specified for each of the standards that are not yet implemented.</p>
	CCyB, Liquidity, Remuneration, Leverage ratio (revised)	Dec 2017	4, 1	While the standards are in place, some disclosure templates need to be adjusted in order to incorporate the latest revisions.
	Key metrics, IRRBB, NSFR	Jan 2018	1	The draft is under development. The final rule will be published as part of the publication of the standard itself.
	Composition of capital, RWA overview, Prudential valuation adjustments, G-SIB indicators	Dec 2018	1	The draft is under development.
	TLAC	Jan 2019	1	The draft is under development. The final rule will be published as part of the publication of the standard itself. Implementation of the TLAC standard was originally planned for 2020, but was delayed due to the Covid-19 pandemic.

<b>Leverage</b>	Existing (2014) exposure definition	Jan 2018	4	Final Basel III rule approved in July 2013, effective 1 January 2014. The rule (i) included the generally applicable US Tier 1 leverage ratio minimum requirement of 4% of Tier 1 capital to total on-balance-sheet assets, and (ii) introduced the supplementary leverage ratio (SLR) (ie the Basel III leverage ratio) minimum requirement of 3% of Tier 1 capital to total leverage exposure for all US banking organisations subject to the advanced approaches rule (ie banking organisations with total consolidated assets equal to \$250 billion or

				<p>more, or consolidated total on-balance-sheet foreign exposure equal to \$10 billion or more, and their subsidiaries), effective 1 January 2018. The SLR was revised in September 2014, consistent with the January 2014 Basel Committee revisions to the Basel III leverage ratio.</p> <p>In addition, in April 2014, the United States agencies adopted enhanced SLR standards for United States G-SIB bank holding companies and their insured depository subsidiaries. United States GSIB bank holding companies must maintain a leverage buffer greater than two percentage points above the minimum supplementary leverage ratio requirement of three percent, for a total of more than five percent, to avoid restrictions on capital distributions and discretionary bonus payments. Insured depository subsidiaries of US GSIBs must maintain at least a six percent supplementary leverage ratio to be considered "well capitalised" under the agencies' prompt corrective action framework. The enhanced SLR standards are effective 1 January 2018.</p>
	Revised (2017) exposure definition	Jan 2023	3	Final rule issued in November 2019. Banks may adopt beginning April 2020 but must adopt by January 2022.
<b>SIB</b>	G-SIB requirements	Jan 2016	4	Final G-SIB rule approved in July 2015, phase-in begins 1 January 2016, becoming fully effective 1 January 2019. The final rule requires US G-SIBs to calculate their surcharges under two methods and use the higher of the two surcharges. The first method is based on the Basel Committee framework and considers a G-SIB's size, interconnectedness, cross-jurisdictional activity, substitutability and complexity. The second method uses similar inputs but is calibrated to result in significantly higher surcharges and replaces substitutability with a measure of the firm's reliance on short-term wholesale funding.
	D-SIB requirements	Jan 2016	na	All US bank holding companies with total assets of \$50 billion or more are subject by regulation to enhanced prudential standards, including the risk-based capital, leverage, and liquidity requirements discussed above, as well as capital planning, stress testing, resolution planning and risk management requirements.
	Leverage ratio buffer	Jan 2023	4	Effective 1 January 2018, US GSIB bank holding companies must maintain a leverage ratio buffer greater than two percentage points above the minimum supplementary leverage ratio requirement of three percent, for a total of more than five percent, to avoid restrictions on capital distributions and discretionary bonus payments. Insured depository subsidiaries of US GSIBs must maintain at least a six percent supplementary leverage ratio to be considered "well capitalised" under the agencies' prompt corrective action framework. In April 2018, FRB and OCC issued a proposal to modify the fixed 2

				percent leverage buffer applicable to US GSIBs to be set to one half of each such firm's GSIB capital surcharge.
<b>IRRBB</b>	Interest rate risk in the banking book	2018	4	<p>The IRRBB standard is substantially implemented within existing U.S. supervisory policies and other directives (ie the Joint Agency Policy Statement: Interest Rate Risk and the Interagency Advisory on Interest Rate Risk; together, the IRRBB guidelines).</p> <p>In addition, U.S. bank supervisors have statutory authority to use informal and formal enforcement powers to address interest rate risk deficiencies at institutions subject to the IRRBB guidelines. These powers can include informal Board Resolutions and Memorandums of Understanding as well as formal Cease and Desist Orders.</p> <p>The U.S. Congress also enacted law (Section 39 of the Federal Deposit Insurance Act) which directed the federal banking agencies to devise Interagency Guidelines Establishing Standards for Safety and Soundness relating to several prudential aspects of banking—including interest rate risk. The standard for interest rate risk states, “An institution should manage interest rate risk in a manner that is appropriate to the size of the institution and the complexity of its assets and liabilities; and provide for periodic reporting to management and the board of directors regarding interest rate risk with adequate information for management and the board of directors to assess the level of risk.” If financial institutions do not meet this standard, the law (as directed by Section 39 of the FDI Act) states that the applicable federal banking agency may require an institution to submit a plan to achieve compliance with the standard. The U.S. agencies can use “Section 39 Plans” to address any weaknesses related to IRRBB programs.</p>
<b>Liquidity</b>	Monitoring tools for intraday liquidity management	Jan 2015	4	Regulation YY and other relevant standards SR 10-6, and SR 14-1 are finalised and implemented by covered institutions. In addition, the 2017 Comprehensive Liquidity Assessment and Review (CLAR) confirmed U.S. GSIBs’ ability to meet the international principles outlined in BCBS 248.
	Net Stable Funding Ratio (NSFR)	Jan 2018	2	Proposal issued in May 2016.
<b>Large exposures</b>	Supervisory framework for measuring and controlling large exposures	Jan 2019	4	The Federal Reserve Board issued a final rule in August 2018 to apply single-counterparty credit limits to bank holding companies with total assets of USD50 billion or more.
<b>Disclosure</b>	Revised Pillar 3 requirements (published 2015)	Dec 2016	1	
	CCyB, Liquidity, Remuneration, Leverage ratio (revised)	Dec 2017	4	4: CCyB – As part of the implementation of the CCyB framework in 2013, the U.S. agencies approved the CCyB disclosure standards (ie disclosures dealing with the geographical distribution of credit exposures subject to the CCyB). Reporting became effective 1 January 2014 for firms that have private sector

			<p>credit exposures to jurisdictions in which the countercyclical buffer rate is higher than zero.</p> <p>4: Liquidity – The Federal Reserve adopted the Liquidity Coverage Ratio (LCR) disclosure standard in December 2016 and bank holding companies subject to the LCR began reporting 2Q 2017.</p> <p>4: Leverage Ratio (revised) – As noted above, the U.S. agencies adopted the two common disclosure templates contained in the Basel III leverage ratio framework and U.S. top-tier holding companies subject to the advanced approaches rule started disclosing the supplementary leverage ratio (SLR) effective 1 January 2015. The U.S. agencies revised the SLR consistent with the Basel revisions and updated the disclosure standards in September 2014 (with firm disclosures still effective 1 January 2015).</p> <p>Remuneration disclosure of banks is based on SEC requirements.</p>
Key metrics, IRRBB, NSFR	Jan 2018	4,4,2	<p>4: Key metrics - Large bank holding companies report on the Y9Cs in regulatory capital, schedule HC-R, the impact of GSIB requirements (capital buffer) and any impact applicable to the transition to CEL. These banks also disclose addition information related to GSIB requirements on report 101 in Schedule A. TLAC impact is reported as part of the prospectus filings with the SEC.</p> <p>4: IRRBB - U.S. banks disclose interest rate sensitivity data on their regulatory reports. In addition, large U.S. banks and BHCs publicly release substantial amounts of information on the impact on earnings and capital from interest rate movements as part of their annual SEC 10-K filings. How the banks arrive at these results involves proprietary models and related assumptions. Bank supervisors carefully review key models and underlying assumptions. Under U.S. law, supervisors cannot compel banks to disclose information that is proprietary, including how banks arrived at the disclosed impact analysis.</p> <p>2: NSFR - As part of the NSFR proposal issued in May 2016, the Federal Reserve would require public disclosure of a firm’s NSFR and certain of its components.</p>
Composition of capital, RWA overview, Prudential valuation adjustments, G-SIB indicators	Dec 2018	4	<p>4: Composition of capital disclosure and RWA overview disclosure – In 2013, the U.S. agencies implemented these two disclosure standards, consistent with the adoption of the Basel III standards. Firms subject to the advanced approaches rule began reporting January 2014.</p> <p>4: GSIB Indicators – Every U.S. holding company with more than \$50 billion in total consolidated assets must disclose on a quarterly basis the 12 indicators used in the GSIB framework. On an annual basis, the Federal Reserve discloses the year-end values of the 12 GSIB assessment indicators that are sent to</p>

				<p>Basel for inclusion in the BCBS's global aggregates on the following website: <a href="https://www.ffiec.gov/nicpubweb/nicweb/Y15SnapShot.aspx">https://www.ffiec.gov/nicpubweb/nicweb/Y15SnapShot.aspx</a>.</p> <p>Na: Prudential valuation adjustments – These disclosures are not applicable because the U.S. agencies follow U.S. GAAP in the capital calculation and disclosures. The U.S. agencies view U.S. GAAP as the basis for the appropriate measurement of the fair value of assets, obviating the need for any further (prudentially based) mark-downs of assets reported at fair values on balance sheets. As a result, the U.S. agencies have not implemented prudential valuation adjustments (or additional valuation adjustments).</p>

<b>Leverage</b>	Existing (2014) exposure definition	Jan 2018	4, 3	(4) The exposure definition (as modified by the Basel Committee in January 2014) was implemented into European law by Commission Delegated Regulation (EU) 2015/62, which was published on 17 January 2015 (Official Journal of EU). (3) Legislation introducing a capital requirement based on the leverage ratio was published in the Official Journal on 7 June 2019 and will apply as of 28 June 2021.
	Revised (2017) exposure definition	Jan 2023	3	Legislation further aligning the exposure definition and introducing a capital requirement based on the leverage ratio was published in the Official Journal on 7 June 2019. The requirement will apply as of 28 June 2021.
<b>SIB</b>	G-SIB requirements	Jan 2016	4	The disclosure requirements for G-SIBs and the identification methodology (technical standards on the latter were published in October 2014 (Official Journal of EU) and are applicable from 1 January 2015) are currently in force. Mandatory G-SIB buffer implemented by Article 131 of Directive 2013/36/EU with date of application of 1 January 2016. For the national implementation status of G-SIB and D-SIB requirements, see the respective EU jurisdictions.
	D-SIB requirements	Jan 2016	4	Optional D-SIB buffer implemented by Article 131 of Directive 2013/36/EU with date of application of 1 January 2016. EBA guidelines on criteria to assess D-SIBs were published in December 2014.
	Leverage ratio buffer	Jan 2023	3	Legislation on the framework for a leverage ratio buffer was published in the Official Journal on 7 June 2019. The requirements will apply as of 1 January 2022.
<b>IRRBB</b>	Interest rate risk in the banking book	2018	4, 3	The standard is implemented in a two steps process in the EU: (4) As a first step, on 19 July 2018 EBA has published revised EBA Guidelines on the management of interest rate risk arising from non-trading activities, which apply as of 30 June 2019. (3) As a second step, legislation implementing the standard on IRRBB was published in the Official Journal on 7 June 2019. The requirements will apply as of 28 June 2021.
<b>Liquidity</b>	Monitoring tools for intraday liquidity management	Jan 2015	4	EU regulation (Article 86 of Directive 2013/36/EU) sets out that institutions shall have robust strategies, policies, processes and systems for the

				identification, measurement, management and monitoring of intraday liquidity risk.
	Net Stable Funding Ratio (NSFR)	Jan 2018	3	Legislation implementing the standard on the NSFR was published in the Official Journal on 7 June 2019. The requirements will apply as of 28 June 2021.
<b>Large exposures</b>	Supervisory framework for measuring and controlling large exposures	Jan 2019	3	Part Four (Articles 387-403) of Regulation (EU) No 575/2013 is applicable as of January 2014. Legislation adjusting the existing EU large exposure regime to ensure alignment with the BCBS large exposures framework was published in the Official Journal on 7 June 2019. The requirements will apply as of 28 June 2021.
<b>Disclosure</b>	Revised Pillar 3 requirements (published 2015)	Dec 2016	4, 3	(4) The first phase of implementation has been finalised by the EBA has adopted, in December 2016, Guidelines to implement the revised Pillar 3 framework (Phase 1) released by the Basel Committee in January 2015. The Guidelines apply from 31 December 2017, but G-SIBs were encouraged to comply with a subset of those Guidelines as soon as 31 December 2016. (3) Legislation implementing the changes to the Pillar 3 framework (completed as of December 2018) was published in the Official Journal on 7 June 2019. 				Finansinspektionen has the legal mandate to identify G-SIBs (G-SIIs in EU-language) and apply a so-called G-SII capital buffer. Historically Finansinspektionen has identified Nordea as a G-SIB. As from October 1 <sup>st</sup> , 2018, Nordea is a Finnish bank and as such under supervision of the Single Supervisory Mechanism of the ECB and the Finnish FSA. In the 2018-exercise Finansinspektionen, jointly together with the ECB and the Finnish FSA, based on Nordea's low scores agreed to not identify Nordea as a G-SIB. As a consequence, there is no longer any G-SIBs identified in the Nordic Region.
	D-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) National legislation is in force, according to which Finansinspektionen has been given all required mandates. In October 2015, Finansinspektionen decided to strictly follow the EBA guideline for O-SII identification (EU language for the D-SIB framework). Swedish banking groups identified as O-SIIs are required to hold an O-SII capital buffer of 2% from 1 January 2016. Also, Finansinspektionen has been given the legal powers to set a systemic risk buffer. A systemic risk buffer of 3% CET1 has been applied to Sweden's largest banks at group level from 1 January 2015. The system risk buffer and O-SII-buffer are not additive. (Additionally, another 2% CET1 requirement has been set for these banking groups in Pillar 2.)

<b>SIB</b>	G-SIB requirements	Jan 2016	(EU: 4)	(Follows EU and National process) G-SIB framework implemented through EBA technical standards, with G-SIB disclosure requirements and capital surcharges already in force. Where applicable to a firm, G-SIB/G-SII buffers are set by the PRA using its powers under section 55M of FSMA to increase the size of the firm's combined buffer (see PRA SS6/14).
	D-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) The PRA's approach to identifying O-SIIs was published in February 2016 and is in accordance with Article 131 of Directive 2013/36/EU. The PRA publishes an updated list of UK O-SIIs to its website on an annual basis. The Financial Policy Committee's (FPC) framework for the Systemic Risk Buffer was published in May 2016. As part of the framework, the PRA published a Statement of Policy outlining its approach to the implementation of the Systemic Risk Buffer in December 2016. The framework and Statement of Policy will apply to ring-fenced banks and large building societies as defined in The Capital Requirement (Capital Buffers and Macro-prudential Measures) (Amendment) Regulation 2015 from 2019.
