1 Executive Summary

The annual report on the application of accepted market practices (AMPs) identifies that the number of liquidity contracts and the volumes traded under the AMPs decreases for the four National Competent Authorities (NCAs) that have them in place (CNMV, CMVM, CONSOB and AMF) since June 2020. A small decrease in the number of contracts and volumes can be detected for CNMV and AMF but both remain relevant in their respective markets while only a marginal number of liquidity contracts are detected for CONSOB (two liquidity contracts) and CMVM (one contract operative since January 2020) AMPs.

Background

This annual report (the Report) to the European Commission concerns the application of AMPs under Regulation (EU) No 596/2014 of the European Parliament and of the Council of 16 April 2014 on market abuse (MAR)¹ in the markets concerned.

The Report also provides a general description of the legislative framework under the MAR and the ESMA Opinion “Points for convergence in relation to MAR AMPs on liquidity contracts”.

Next Steps

The information reported to ESMA and included in this report will inform ESMA’s ongoing work aimed at fostering supervisory convergence in the application of the MAR and contribute to ESMA’s goal to develop an EU outcome-focused supervisory and enforcement culture.

¹OJ L 173, 12.6.2014, p. 1.

2 Background

1. This Report is drafted pursuant to Article 13(10) of MAR, prescribing that ESMA shall monitor the application of Accepted Market Practices (AMPs) and shall submit an annual report to the Commission on how they are applied in the markets concerned. The Report is based on the information provided by the relevant NCAs.
2. The current regulatory framework concerning AMPs is set forth in Article 13 of MAR and in the Commission Delegated Regulation (EU) 2016/908 of 26 February 2016² (RTS on AMPs).
3. MAR determines a harmonised framework prohibiting market manipulation. This encompasses a prohibition from entering into a transaction, placing an order to trade or engaging in behaviour which gives, or is likely to give, a false or misleading signal as to the supply of, demand for, or price of, an instrument falling within the scope of MAR, or which secures, or is likely to secure, the price of such an instrument.
4. MAR also provides an exception to the general prohibition of market manipulation. To benefit from that exception, the concerned person needs to establish that the transaction conducted, the order placed or the behaviour engaged in has been carried out for legitimate reasons and in accordance with an AMP established by an NCA.
5. As regards the adoption of AMPs under MAR, an NCA intending to establish an AMP must notify ESMA and other NCAs of its intention at least three months before the AMP is intended to take effect. ESMA shall, within 2 months from the receipt of the notification made by an NCA, issue an opinion on the intended AMP and publish it on its website. This opinion shall assess: (a) the compatibility of the intended AMP with Article 13(2) of MAR and the RTS on AMPs and (b) whether the establishment of the AMP would threaten the market confidence in the Union's financial market.
6. Where the opinion issued by ESMA is negative, the notifying NCA is required to publish on its website a notice setting out in full its reasons for establishing the AMP, within 24 hours of establishing it.
7. In this context, in order to ensure a more consistent and convergent approach for the establishment of AMPs on liquidity contracts across the Union, ESMA developed points for convergence which were made public on 25 April 2017 in the form of an ESMA opinion (ESMA70-145-76, hereinafter referred to as the "Points for convergence"³). The Points for convergence reflect a common understanding across NCAs for the safeguards to be provided by AMPs on liquidity contracts. NCAs should take them into account when establishing AMPs on liquidity contracts. It is worth highlighting that these Points for

² Commission Delegated Regulation (EU) 2016/908 of 26 February 2016 supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council laying down regulatory technical standards on the criteria, the procedure and the requirements for establishing an accepted market practice and the requirements for maintaining it, terminating it or modifying the conditions for its acceptance; OJ L 153, 10.6.2016, p. 3–12.

³ Available on this link: https://www.esma.europa.eu/sites/default/files/library/esma70-145-76_opinion_on_point_of_convergence_of_liquidity_contract_amps.pdf.

convergence identify the need for liquidity contracts operating under an AMP to have limits in terms of resources allocated, prices and volumes, differentiating between the liquidity of the instruments concerned.

8. Finally, ESMA notes that Regulation (EU) 2019/2115 amending Directive 2014/65/EU and Regulations (EU) No 596/2014 and (EU) 2017/1129 as regards the promotion of the use of SME Growth Markets⁴ introduces a regime for liquidity contracts available for issuers of financial instruments admitted to trading on SME Growth Markets. The regime set out in that Regulation can coexist with an AMP in a Member State⁵.
9. With reference to the content of the Report, only the AMPs established under MAR are considered. There are no AMPs established anymore under Directive 2003/6/EC of the European Parliament and the Council of 28 January 2003 on insider dealing and market manipulation (MAD) after May 2020, when the last one (CONSOB AMP No 1) was terminated.

3 Information on the legal situation of AMPs established under MAR

3.1 CNMV

10. ESMA issued a positive opinion on the proposed CNMV AMP under MAR on 16 December 2016⁶ followed by CNMV's final decision⁷.
11. Following the biannual review of the AMP established by Article 13(8) MAR and Article 12 of RTS on AMPs, CNMV notified ESMA on 25 July 2019 of a revision proposal, allowing a greater alignment of their AMP with the Points for convergence⁸. The revision of the CNMV

⁴ OJ L320, 11.12.2019, p. 1.

⁵ As indicated in one of the recitals of this Regulation, "Not all competent authorities have established accepted market practices in accordance with Regulation (EU) No 596/2014 in relation to liquidity contracts, which means that not all issuers of financial instruments admitted to trading on SME growth markets currently have access to liquidity schemes across the Union. That absence of liquidity schemes can be an impediment to the effective development of SME growth markets. It is therefore necessary to create a Union framework that will enable issuers of financial instruments admitted to trading on SME growth markets to enter into a liquidity contract with a liquidity provider in the absence of an accepted market practice established at national level. Under such a Union framework, a person entering into a liquidity contract with a liquidity provider would not be deemed to be engaging in market manipulation. It is, however, essential that the proposed Union framework on liquidity contracts for SME growth markets does not replace, but rather complements, existing or future accepted national market practices. It is also essential that competent authorities retain the possibility of establishing accepted market practices in respect of liquidity contracts in order to tailor their conditions to local specificities or to extend such agreements to illiquid securities other than shares admitted to trading on trading venues'.

on_intended_accepted_market_practice_on_liquidity_contracts_notified_by_the_cnmv.pdf](https://www.esma.europa.eu/sites/default/files/library/2016-1663_-on_intended_accepted_market_practice_on_liquidity_contracts_notified_by_the_cnmv.pdf)

⁷ Available on <http://www.cnmv.es/Portal/legislacion/legislacion/cronologico.aspx?id=2017>

⁸ In case of "very illiquid shares", CNMV proposed to set an alternative "hard" limit of 20.000 euros per session. Such "hard" limit, foreseen in the Points for Convergence, would permit exceeding the 25% threshold set out in the AMP; and to permit the financial intermediaries to introduce orders on both sides of the book during auctions and for shares traded only through the "fixing" system, requesting them to have arrangements in place to prevent self-execution. The original MAR AMP did not allow this for this kind of market segment and market phase.

AMP received a positive Opinion from ESMA on 19 September 2019 (ESMA70-155-8524)⁹.

3.2 CMVM

12. ESMA issued a positive opinion on the proposed CMVM AMP on liquidity contracts (ESMA70-145-171)¹⁰ on 27 September 2017 which replaced their MAD AMP. The new CMVM AMP has been in force since 9 November 2017 (date of the CMVM's Board decision).
13. ESMA notes that, according to Article 13(8) of MAR, NCAs have to review at least every two years the AMPs they have established. In the case of CMVM's AMP, this revision has not taken place yet. However, ESMA also appreciates that the CMVM's AMP only became operational in the course of 2020. Moreover, CMVM has informed ESMA of their intention to launch the revision of their AMP in Q4 2021. According to CMVM's reported schedule, the revised AMP should be implemented in H1 2022.

3.3 CONSOB

14. ESMA issued a positive assessment of the proposed CONSOB AMP¹¹ on 31 January 2020, based on the agreement of CONSOB to monitor the effective implementation of certain elements of the proposal specifically. The elements identified as controversial were the possibility of performing the liquidity contract at the financial intermediary's own risk, the capacity of financial intermediaries to operate under the AMP while acting simultaneously as specialist in relation to the same financial instrument and the possibility that the asset manager (and not the CIU it represents) assumes the risk of the liquidity contract.
15. The CONSOB AMP started to apply on 18 May 2020. On the same date the CONSOB AMP No 1 was terminated. CONSOB AMPs No 2 and No 3 (also approved under the MAD) had been withdrawn on 30 June 2019.

3.4 AMF

16. On 11 April 2018, ESMA issued a negative opinion on the AMF's AMP proposal (ESMA70-145-442)¹² mostly based on the fact that issuers and financial intermediaries were permitted to benefit from waivers in terms of resources allocated, prices and volumes for a two-year transitional period of observation from its application start date. The AMF committed to use the information gathered over this transitional period to assess whether

¹⁰ Available on this link https://www.esma.europa.eu/sites/default/files/library/esma70-145-171_opinion_on_cmvm_amp_on_liquidity_contracts.pdf

¹¹ Available on this link https://www.esma.europa.eu/sites/default/files/library/esma70-155-7850_consoob_amp.pdf

¹² Available on https://www.esma.europa.eu/sites/default/files/library/esma70-145-442_opinion_on_amf_amp_on_liquidity_contracts.pdf.

the thresholds set by the AMP were properly calibrated. That AMF AMP became applicable on 1 January 2019, whereas the old AMF AMP expired at the end of 2018.

17. ESMA had already mentioned the misalignments between that AMF's final decision and the Points for convergence concerning volumes, prices, resources and transparency in a previous report¹³.

18. On 28 May 2021, ESMA issued another negative opinion on a new AMF AMP proposal (ESMA70-155-11961)¹⁴ intended to update the above-mentioned AMP after the two-year transitional period. The grounds for the negative opinion were:

- a. The lack of price limits in auction phases, where price impact is permitted as long as it is not 'significant', allowing in practice to place orders that may have an impact on the price, against what is set in the Points for convergence.
- b. The lack of limits on volumes traded, with particular reference to illiquid shares, since the AMF proposal permitted higher percentages than those set out in the Points for convergence that could only be applied after an absolute threshold of 25.000 euros had been exceeded.
- c. The absence of limits on positions.

19. Nonetheless, the new AMF AMP became applicable on 1 July 2021. AMF published a notice¹⁵ in accordance with Article 13(5) of MAR providing their justification to not follow ESMA's opinion:

- a. The compulsory identification of each order from a liquidity contract, including those participating to an auction, together with the daily submission of the orders and transaction from the liquidity contracts to the AMF by the market operator and AMF's ongoing monitoring of the trading patterns of those contracts address the risks of market manipulation.
- b. In AMF's view, such monitoring is necessary because compliance with an AMP is a necessary but insufficient condition to benefit from the exemption granted by MAR, since orders or transactions compliant with the AMP may still have a manipulative purpose.
- c. AMF also considered that their AMP introduced more stringent price limits than those set out in the Points for convergence, reducing the potential risks for market integrity.

4 Application of the established AMPs

20. The below sections contain information on the application of the AMPs established under MAR. The data on the application of the AMPs and on the supervision performed on them has been submitted to ESMA by the relevant NCAs.
21. The information provided in this section is complemented with the tables in the Annex.

4.1 AMP established by the CNMV under MAR

4.1.1 Evolution of the CNMV AMP

22. CNMV reported a slight decrease of around 9.5% in the number of contracts over the reporting period: there were 38 active contracts at the end of the H1 2021, compared to the 42 contracts at the beginning of the second half of 2020. It is worth highlighting that all those liquidity contracts are traded under the XMAD (Bolsa de Madrid) MIC code.

23. As regards the liquidity of the shares benefitting from the MAR AMPs, the number of liquid and illiquid contracts remained mostly unchanged. More in detail, in H1 2021 there were 21 liquid and 22 illiquid contracts while in H2 2020 there were 20 liquid contracts and 22 illiquid contracts.
24. A decrease of roughly 19% can also be observed when comparing the volumes traded under the liquidity contracts in H1 2021 and H2 2020.

25. CNMV pointed out that the amendment of their AMP only entered into force on 03/03/2020¹⁶. Since then, some “illiquid” issuers benefitted from a hard daily 20,000 euros threshold. In particular, CNMV reports that several issuers belonging to the “fixing” segment, have resorted to this option. This has allowed them to sometimes exceed the daily threshold of 25%, providing greater liquidity to the market within the framework of the AMP.
26. The percentages provided by CNMV in Table 1 relate to the actual total trading volume of the relevant period, while volume parameters in the Points for convergence refer to the percentage of the average daily volume on the market in the previous 20 to 30 trading sessions. As a consequence, CNMV did not report any breach of the Points for convergence.

4.1.2 Issues identified

27. CNMV informed that certain issuers informally forwarded them their concerns about the insufficiency of the resources allocated to their liquidity contracts. For these issuers, the resources allocated to their liquidity contracts, calculated at the time of the signature of the contract, had become insufficient due to significant changes in prices and volumes traded. These issuers informally made a proposal to CNMV to modify the limits of resources allocated to their liquidity contracts under certain circumstances.
28. In general, CNMV did not consider these requests to be reasonable. Exceptionally, for a liquid share that experienced a structural change in its trading conditions (a reverse stock split and a 4x price increase sustained in time), the issuer had to cancel its liquidity contract and enact a new one taking into account the new trading environment.

4.2 AMP established by the CMVM under MAR

4.2.1 Evolution of CMVM AMP

29. CMVM only has one active contract under the CMVM AMP established in November 2017.
30. The liquidity contract refers to MERLIN PROPERTIES shares, a Spanish company listed in Bolsa de Madrid and Euronext Lisbon under the dual listing regime, that is operational since 15 January 2020.
31. CMVM highlights that the liquidity of MERLIN PROPERTIES shares traded on the Portuguese market is considerably lower than the liquidity of those shares in the Spanish market. CMVM also reports that the total number of shares traded under the AMP has decreased sharply since H1 2020, falling from 44,473 to 1,794 in H2 2020 and 909 in H1 2021. Such decrease is consistent with the decline in the total number of MERLIN shares

¹⁶ Circular 2/2019, de 27 de noviembre, de la CNMV, available in https://www.boe.es/diario_boe/txt.php?id=BOE-A-2019-17695

in the Portuguese market since H1 2020, falling from 64,971 to 36,445 in H2 2020 and 14,246 in H1 2021.

32. The percentage of the shares traded under the liquidity contract has also decreased vis-à-vis H1 2020. As the percentage of shares traded under the liquidity contract is limited to 5% of the average traded volume over the previous 20 sessions (MERLIN shares are highly liquid under the CMVM AMP), the volumes traded under the AMP have severely decreased when compared to H1 2020. In line with that, the percentage of shares traded aside from the AMP have increased when compared to H1 2020 despite the overall decrease.

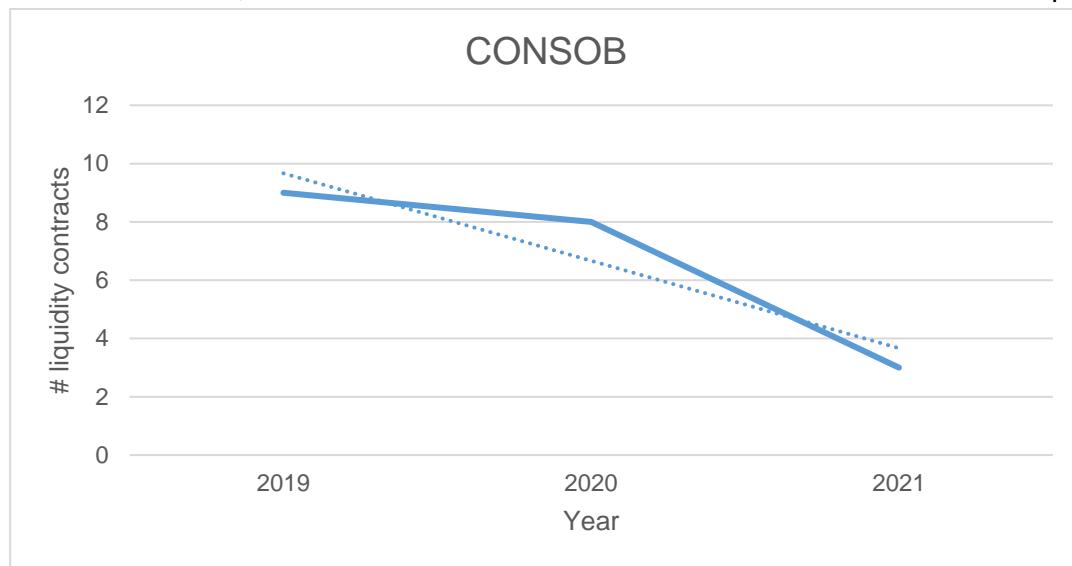

4.2.2 Issues identified

33. The financial intermediary performing the liquidity contract on MERLIN PROPERTIES shares pointed out to CMVM that these shares are liquid in accordance with their turnover in Bolsa de Madrid¹⁷, but the volumes traded in Euronext Lisbon are considerably lower. Therefore, the financial intermediary considers that the current AMP trading limits render the liquidity contract ineffective in practice.
34. As indicated above, CMVM should address this issue in the broader context of the periodic revision of their AMP.

4.3 AMP established by CONSOB under MAR

4.3.1 Evolution of CONSOB AMP

35. CONSOB reports that only three liquidity contracts operated under the MAR AMP¹⁸ from 1 July 2020 to 18 May 2021. One of them (Unieuro) terminated before the end of the reporting period. The other two, Banca Sistema and Fondo Immobiliare Dinamico were still in place

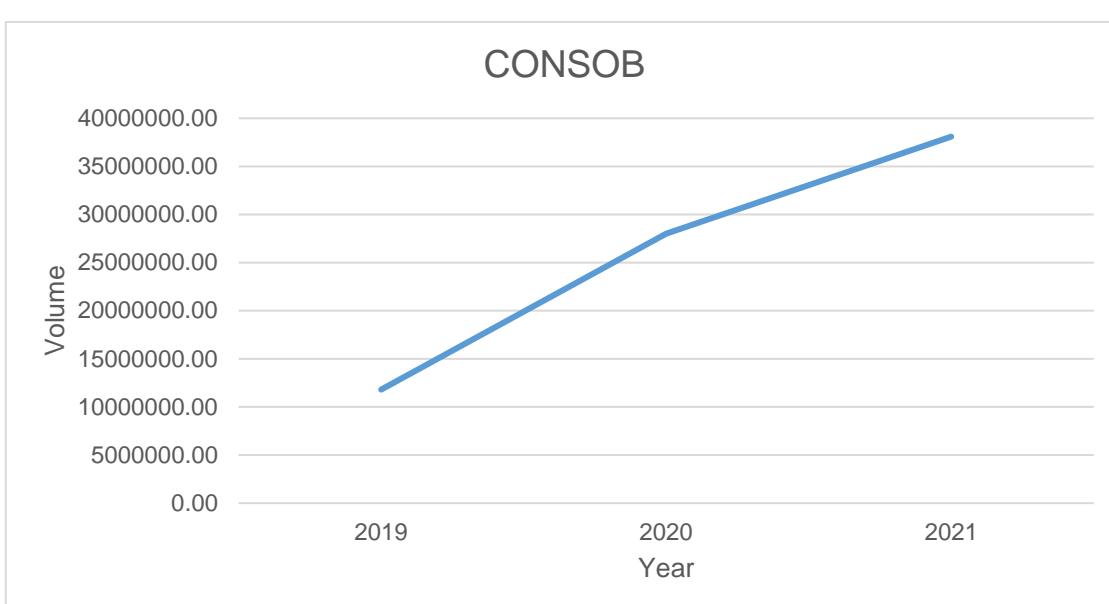

¹⁷ Article 4(1)(a) of Regulation (EU) No 600/2014 (MiFIR)

¹⁸ From the six operational liquidity contracts reported for last year's report, three expired in 2020: NB Aurora SIVAF, Seri Industrial SPA and Guala Closures.

at the end of the reporting period.

36. The three liquidity contracts generated actual trades (while in the previous Report on AMPs it was noted that only six out of eight contracts generated actual trades) and the volumes in terms of number of shares purchased/sold increased from 28 million shares to a total of 38 million shares.
37. However, CONSOB reports that the increase in volume of shares purchased/sold was mainly due to the contract on Banca Sistema shares, which reached 10% of the market volumes (in terms of number of shares traded), while the transactions under the other two contracts did not exceed 5% of market volumes.

38. According to CONSOB, despite the overall liquidity of the shares benefitting from the AMP seems to have increased, none of them moved from illiquid to liquid according to Commission Delegated Regulation (EU) 2017/567.

4.3.2 Supervision of the CONSOB AMP

39. In line with last year's report, CONSOB continues to monitor the activity both on an ex-ante (when the contract is transmitted to CONSOB before the activity starts) and on an ex-post basis (by means of the ongoing analysis of the data gathered from the MiFIR transaction reports and the MiFID II record-keeping obligations for investment firms).
40. Other than that, CONSOB reports the same specific monitoring activity on these liquidity contracts as for last year's report¹⁹.

¹⁹ Organizing meetings with trade associations and its members to present the new MAR AMP and discussing the issues related to it; examining the new contracts under the MAR AMP; examining quarterly reports sent by the issuers on the trading activity; liaising with issuers and financial intermediaries, in order to obtain some information on the continuation of the activity under the

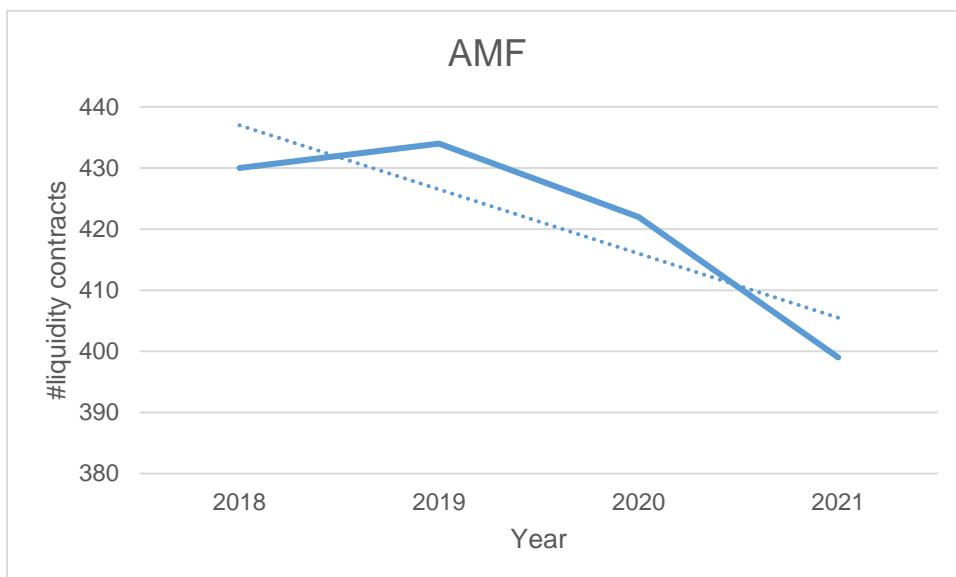

41. Finally, CONSOB reports paying specific attention where the financial intermediary carries out the activity under the AMP at its own risk or it acts simultaneously as specialist in the same financial instrument, and where the asset manager bears the financial risk of the activity.
42. CONSOB has not reported any other issues since the implementation of the new AMP.

4.4 AMP established by the AMF under MAR

43. As indicated above, the AMF's MAD AMP on liquidity contracts for shares terminated on 31 December 2018 and was substituted by the MAR AMP that entered into force on 1 January 2019. The MAR AMP has been updated by a new one which entered into force as of 1 July 2021, on which ESMA issued a negative opinion.

4.4.1 Evolution of the AMF AMP

44. Over the reporting period, the number of liquidity contracts decreased around 5.5%. There were 422 liquidity contracts at the beginning of H2 2020 and 399 at the end of H1 2021. This decrease is in line with the trendline over the last reporting periods as can be observed below.

45. In terms of liquidity, the number of liquidity contracts on illiquid shares still represents roughly 75% of the overall number, despite a decline by approximately 6.5%. The percentage of liquidity contracts on liquid shares remains stable at around 25% (121 out of

MAR AMP; and as for the 2020's AMP report, CONSOB is still assessing with the Italian market operator the possibility of setting a flag to identify trades and orders related to these liquidity contracts. Nonetheless, CONSOB reports that their standard IT tools enable them to identify aggressive orders, high market share of liquidity contracts, etc.

the total 491 at H1 2020 compared to 105 out of 399 in H1 2021) at the end of the reporting period.

46. In particular, the AMF reports that only eight shares changed the liquidity segment during Q1 2021 (four became liquid whilst other four became illiquid).
47. AMF noted that 40 issuers fully terminated their liquidity contract without transferring its management to another investment firm (six for liquid shares and 34 for illiquid shares). There is a wide range of reasons for such a termination to take place including market events (e.g. delisted shares, take-over bid, etc.) and the issuer's decision.
48. Moreover, the AMF highlights that a substantial number of transfers were observed during the period (50).
49. Nevertheless, the report shows that the number of new contracts remained significant during the reporting period (17 contracts, 2 liquid and 15 illiquid). Among the eighteen issuers whose shares were admitted to trading on Euronext during the reporting period, around half of them signed a liquidity contract.
50. All liquidity contracts are carried out on Euronext Paris (regulated market) and Euronext Growth Paris (MTF) which are trading venues under the AMF's jurisdiction:

Trading venue	total	liquid stocks	illiquid stocks
Euronext Growth Paris	122	4	118
Euronext Paris	277	102	175
Overall	399	106	293
		26,6%	73,4%

4.4.2 Supervision of the AMP by AMF

51. The AMF measures to monitor liquidity contracts under the AMP remain as for last year's report²⁰. AMF also reports that those measures, adopted to supervise a high number of liquidity contracts, were considered sufficient for the new AMP.
52. In addition, the AMF informed ESMA that they had carried out a series of short thematic "SPOT" inspections²¹ targeting liquidity contracts between May and September 2020 covering the implementation of liquidity contracts from 1 January 2019 to 30 June 2020.

²⁰ Monthly reports from investment firms to the AMF in order to keep the list of liquidity contracts in force updated and to get information on new, suspended and terminated contracts; Legal documentation is sent by issuers to the AMF through a dedicated email address. This documentation is used to check the level of resources allocated by the issuers to their liquidity contract; In coordination with the market operator, a new flag was implemented in order to facilitate the identification of trades and orders related to liquidity contracts; Investment firms are requested to submit to the AMF a monthly report in case they crossed the volume limits specified in the AMF AMP; and IT programme to monitor the performance of liquidity contracts (identification of aggressive orders, market share of liquidity contracts, etc.).

²¹ Summary of SPOT inspections on liquidity contracts, available on the [AMF website](#).

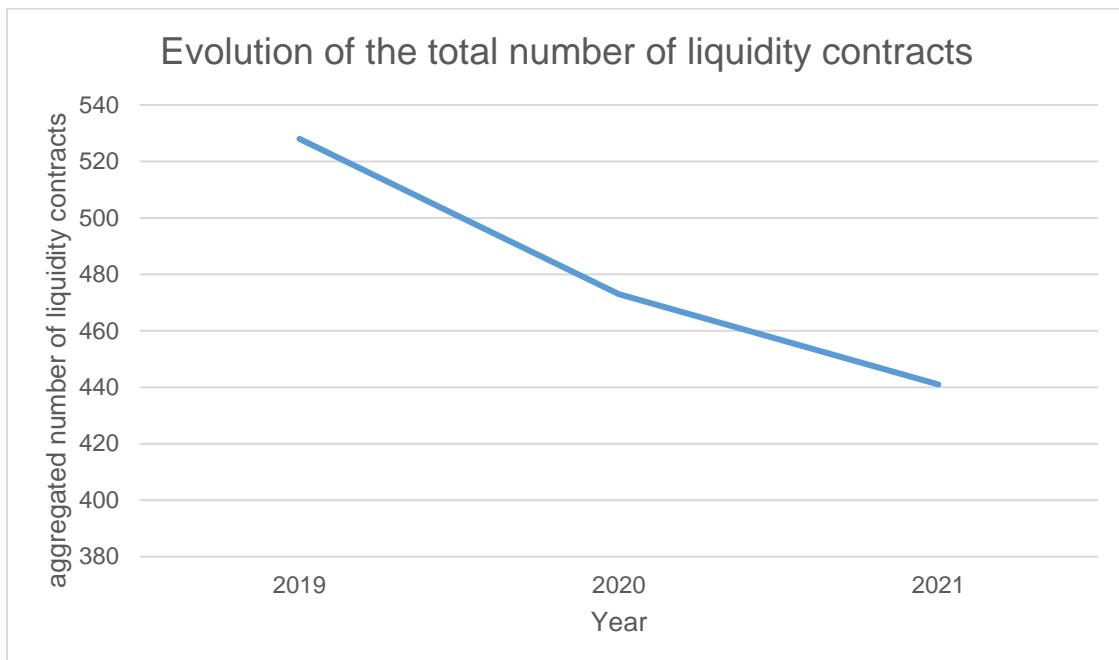

53. These SPOT inspections were carried out to ensure that five financial intermediaries had implemented the provisions applicable to effectively stimulating the market in an issuer's shares under a liquidity contract. Particular attention was paid to (i) the organisational structure of the financial intermediaries; (ii) the management of volume and price limits and breaches of these limits; (iii) the compliance monitoring system for liquidity management activities; and (iv) information and transparency requirements.
54. AMF informs that the results of the SPOT inspections, the retrospective analysis and extensive discussions with their industry were taken into consideration to develop their new AMP.
55. ESMA already analysed in detail this retrospective analysis when issuing the opinion noting that the data provided there did not seem to justify the departure from the volume limits and the resource limits recommended in the Points for convergence²².

5 Conclusions

5.1 General considerations – application of AMPs established under MAR

56. Despite that the four AMPs for liquidity contracts established under MAR by CNMV, CMVM, AMF and CONSOB are operational, the importance of AMPs remains limited, both in terms of the affected countries and in terms of volumes traded under the AMPs.
57. From an overall perspective, the aggregated data of last years' reports shows a decrease in the total number of liquidity contracts established by the different AMPs.

²² ESMA Opinion on AMF AMP paragraphs 54 to 56, 62 to 64, 80 to 84

58. The available factual evidence limits the overall importance of the liquidity contracts: looking at the French example²³, which is the country where these contracts are more heavily used (circa 70% of the listed issuers), the trading volumes represent less than 1% of the amounts traded on the relevant stocks and less than 0.5% of the total amounts traded in the Paris marketplace (i.e. all listed shares).
59. Even in the case of illiquid shares the importance of the amounts traded seems to be limited: AMF's retrospective analysis clarifies that the financial intermediaries only carried out transactions on 25% of the trading sessions.
60. At the same time, ESMA acknowledges that there are different parameters under which the efficacy of a liquidity contract can be measured: spread, available liquidity at the best limits, ensuring the regularity of trading, avoiding abrupt disruptions in market pricing. Therefore, it is not possible to measure the impact of these liquidity contracts solely on the basis of the frequency of the trades or the number of shares traded.
61. As an example, it is possible that a liquidity contract is helpful in trading a limited number of shares in an illiquid share while another liquidity contract for a liquid share turns out to be less efficient despite having traded a much higher number of shares.

5.2 Evolution of the different AMPs

62. The specific analysis of the data reported by the different NCAs does not indicate big changes with respect to the previous report.

²³ Data taken from pages 9 and 10 of the AMF's Retrospective analysis, available on the [AMF's website](#).

63. In Spain there were 38 active contracts at the end of H1 2021. This figure indicates a small decrease compared to last year's report (42). Nevertheless, the number is still significantly higher compared to the one at the entry into application of the CNMV AMP (27).
64. The number of contracts in France also decreased slightly compared to the previous periods. The number of issuers who entered into a liquidity contract remained relatively stable over the last two reporting periods (434 at the end of H1 2019 and 422 at the end of H1 2020). During this period, however, the number of liquidity contracts at the end of H1 2021 stood at 399.
65. In terms of liquidity, no big changes can be identified. As previously noted, despite that the number of contracts slightly decreased in France and Spain, the percentage of liquid and illiquid shares remained relatively stable.
66. When comparing the volumes traded under the liquidity contracts, similar trends can be identified in France and Spain for this reporting period.
67. Under the French MAR AMP, the evolution between H2 2020 and H1 2021 shows a decrease of 15% after last year's 6% increase. This figure is obtained comparing the number of purchases and sales in the context of the same liquidity contracts for both H1 2021 and H2 2020
68. Under the Spanish MAR AMP, CNMV reports a 19% decrease in volumes traded this year that follows a 9% decrease in last year's report. This figure is obtained comparing the number of purchases and sales in the context of the same liquidity contracts for both H1 2021 and H2 2020.
69. In Italy and Portugal there are respectively two and one liquidity contracts active at the end of the reporting period. The volumes traded under them are marginal with the exception of Banca Sistema.

5.3 Other relevant issues for the future implementation of AMPs

70. Looking forward, ESMA considers that there are two elements worth noting: the pending revision of the CMVM AMP and the full deployment of the new regime of liquidity contracts for SME issuers.
71. As regards CMVM's AMP, ESMA reiterates that under Article 13(8) of MAR NCAs must revise their existing AMPs at least every two years. CMVM has informed ESMA that it will launch the revision of their AMP in the course of Q4 2021 and intends to have the new AMP implemented by H1 2022.
72. One of the elements that CMVM should address in their revision is how the limits set out in the Points for convergence should be applied when the shares are traded in two trading venues with significant gaps between the liquidity available in them.

73. As regards the full deployment of the new liquidity contracts for SME issuers, the amendments of MAR introduced by Regulation (EU) 2019/2115²⁴ entered into application on 1 January 2021. ESMA published its Final Report on the amendments to the Market Abuse Regulation for the promotion of the use of SME Growth Markets on 27 October 2020. That Report contained ESMA's draft regulatory technical standards setting out a contractual template to be used for the purposes of entering into liquidity contracts for issuers whose financial instruments are admitted to trading on an SME growth market.
74. ESMA also notes that the full implementation of these new liquidity contracts would require the clarification of certain level 1 issues identified by ESMA in its Final Report. In particular, several respondents requested further clarity on how the new regime on liquidity contracts for SMEs interacts with the existing AMPs, for those jurisdictions in which AMPs were adopted, and with other liquidity provision schemes.
75. In that regard, ESMA reiterates the points made in the Final Report²⁵ and stands ready to assist the European Commission in providing a clarification.

²⁴ Regulation (EU) 2019/2115 of the European Parliament and of the Council of 27 November 2019 amending Directive 2014/65/EU and Regulations (EU) No 596/2014 and (EU) 2017/1129 as regards the promotion of the use of SME growth markets; OJ L 320, 11.12.2019, p. 1–10

²⁵ Paragraphs 37 and 38 of the Final Report: 37. As regards the relationship between the liquidity contracts under the draft RTS and liquidity contracts based on AMPs, ESMA notes that Article 13(12) of MAR specifies that "without prejudice to accepted market practices as established in accordance with paragraphs 1 to 11 of this Article, an issuer of financial instruments admitted to trading on an SME growth market may enter into a liquidity contract for its shares". In addition, Recital 7 of the SME GM Regulation provides that "it is, however, essential that the proposed Union framework on liquidity contracts for SME growth markets does not replace, but rather complements, existing or future accepted national market practices. It is also essential that competent authorities retain the possibility of establishing accepted market practices in respect of liquidity contracts in order to tailor their conditions to local specificities or to extend such agreements to illiquid securities other than shares admitted to trading on trading venues". In ESMA's view, the above wording indicates that the regimes of liquidity contracts for issuers listed on SME GMs based on the draft RTS and those based on national AMPs should be able to co-exist. At the same time, ESMA is of the view that issuers should not execute both a liquidity contract based on an AMP and a separate liquidity contract based on the draft RTS. 38. As regards the relationship with other contracts for the provision of liquidity not covered by an AMP, it is ESMA's understanding that such contracts can continue to exist since they are not covered by the SME GM Regulation and the related draft RTS and do not benefit from the same regime (i.e. the regime of liquidity contracts established in the framework of a MAR AMP). ESMA provides the above explanations to give a first and timely indication to market participants about how the new regime should be applied in practice. ESMA considers it appropriate to further assess and clarify the above points via the publication of a Q&A. Since the competence for producing such Q&As is with the EC, ESMA will liaise with the EC in order to effect such a clarification as soon as possible.
