1 Legal Basis

1. Regulation (EU) 2017/2402 of the European Parliament and of the Council¹ ('the Securitisation Regulation') was adopted on 12 December 2017.
2. As set out in the Securitisation Regulation, Article 7(3) and (4) mandates ESMA to produce draft RTS and ITS specifying information on securitisation underlying exposures and investor reports as well as standardised templates for the submission of the information. In addition, a separate article (Article 17(2)(a) and (3)) mandates ESMA to draft RTS and ITS specifying *inter alia* the information and standardised templates that should be provided by the originator, sponsor, or SSPE to comply with the information requirements of Article 7(1).
3. ESMA is mandated to submit these draft RTS and ITS to the Commission by 18 January 2019.

2 Background and Procedure

4. On 22 August 2018, ESMA published its Final Report² on securitisation disclosure technical standards, which addressed ESMA's above-mentioned mandates, and submitted it to the Commission, pursuant to Articles 10(1) and 15(1) of Regulation (EU) No 1095/2010 of the European Parliament and of the Council³ ('the ESMA Regulation').
5. On 14 December 2018, the Commission sent a letter to ESMA requesting amendments to its disclosure technical standards. In particular, the Commission letter "*requests ESMA to examine whether, at the present juncture, the 'No Data' option could be available for additional fields of the draft templates.*" The Commission also noted its agreement with ESMA's overall approach to these standards, while also signalling the need to avoid excessive burdens on reporting entities, in view of the disclosure standards being "*the first instance of a comprehensive Union-wide disclosure regime for securitisations*" and of the sanctioning regime in case of non-compliance.
6. Pursuant to Articles 10(1) and 15(1) of the ESMA Regulation, this notification from the Commission triggers a period of six weeks during which ESMA may amend its draft technical standards on the basis of the Commission's proposed amendments and resubmit

3 Executive Summary

8. ESMA agrees with the Commission's requests to amend its disclosure technical standards. ESMA has performed a number of adjustments broadening the ability for reporting entities to use the 'No Data' options in the respective templates. The basis for making these adjustments has been the Commission's request as well as stakeholder feedback received. At the same time, ESMA recalls the remarks set out in its Final Report regarding the use of 'No Data' options, namely that these should be used to signal legitimate cases where information cannot be provided, or where the template field in question is not applicable. The 'No Data' options do not constitute a form of 'forbearance' or other similar arrangement permitting reporting entities to avoid providing the requested transparency for reasons other than those covered by the specific 'No Data' options defined in the RTS. ESMA will closely monitor the use of the 'No Data' options.
9. Furthermore, in view of the Commission's request for proportionality, as well as ESMA's investor protection mandate, ESMA considers that a substantial amount of feedback received by ESMA requesting adjustments to the 'No Data' options could, in ESMA's view, be more appropriately addressed by making minor adjustments and clarifications to the disclosure requirements in the template fields themselves, rather than adjusting the possibility for reporting entities to use 'No Data' options in these fields. In particular, ESMA has:
 - (a) Adjusted the content to report for some fields, such as fields relating to borrower employment status, certain income-related fields (e.g. primary income, primary income type, primary income currency), the calculation method for the balance of the underlying exposure in arrears, the definition of 'restructuring', and fields relating to geographic regions;
 - (b) Slightly adjusted the collateral sections of the residential real estate and commercial real estate templates to streamline the structures of these templates and remove several fields that became no longer necessary as a result of the restructuring;
 - (c) Adopted a more closely-adapted arrangement for risk retention signalling in asset-backed commercial paper (ABCP) securitisations.
10. ESMA has also taken note of substantial requests from reporting entities and other securitisation market participants not related to the use of 'No Data' options. In ESMA's view, these transmissions reflected a need for additional guidance as market participants move towards the implementation of the templates rather than a need for adjusting the disclosure requirements themselves. To this end, subject to any amendments the Commission may consider necessary to these technical standards, ESMA is publishing alongside this Opinion a first set of Q&As on its website, even before these technical standards are adopted by the Commission. ESMA considers that the combination of

revised technical standards along with detailed guidance will facilitate a smooth transition for market participants once the disclosure templates are adopted by the Commission and begin to apply.

11. In addition, ESMA has also adjusted the drafting of the RTS with respect to the disclosure of inside information and significant event information. These adjustments are aimed at addressing market requests for guidance regarding the application of the inside information and significant event information templates for ABCP and non-ABCP securitisations⁴. This has been achieved by merging the former Annexes 14 and 16 in the draft TS published on 22 August 2018 to create a new Annex 14, which serves to cover inside information or significant event information for non-ABCP securitisation. In the same way, Annexes 15 and 17 in the draft TS published on 22 August 2018 have been merged to into a new Annex 15 in the present revised TS, covering inside information or significant event information for ABCP securitisation. Several adjustments to the recitals of the RTS have been made accordingly as well, with a view to providing further clarity on what ESMA considers to be an appropriate timing for reporting of this information.
12. In ESMA's view, the adjustments contained in these templates do not constitute a departure from the initial policy intention. Rather, it was deemed most appropriate to address the lack of clarity indicated by market participants via an adjustment to the TS, in a manner that neither increases nor reduces the information that was expected to be disclosed under the draft TS published on 22 August 2018, and continues to respect the Securitisation Regulation transparency requirements. ESMA believes this adjustment has instead resulted in a simpler and more efficient set of disclosure TS. Should this be necessary for market participants, ESMA stands ready to provide further guidance on these templates in the form of Q&A.
13. Lastly, ESMA considers that changes to the disclosure requirements with respect to the following higher-level issues are neither within its mandate (as already explained in ESMA's Final Report), nor within the scope of the changes requested by the Commission:
 - (a) Whether private securitisations are covered in the present disclosure requirements;
 - (b) The geographic scope of application of these disclosure requirements; and
 - (c) Transitional periods for these disclosure requirements.

4 ESMA Opinion

4.1 Amendments to the use of 'No Data' options in ESMA's draft securitisation disclosure templates

14. In light of the Commission's request, ESMA has significantly expanded the ability for reporting entities to use the 'No Data' options in the disclosure templates. The basis for making these adjustments has been the Commission's request as well as market feedback received. In light of the Commission's letter, this section focuses first on adjustments to the

⁴ Annexes 14 (non-ABCP inside information), 15 (ABCP inside information), 16 (non-ABCP significant event), and 17 (ABCP significant event) in the draft TS published on 22 August 2018, respectively

use of ‘No Data’ options related to ABCP disclosures, and subsequently discusses adjustments to the use of ‘No Data’ options for the non-ABCP securitisation templates. For ease of reference, Table 1 below summarises the ‘No Data’ options as well as their definition.

Table 1: Options for field values when data is not available

No Data Option	Explanation
ND1	Data not collected as not required by the lending or underwriting criteria
ND2	Data collected on underlying exposure application but not loaded into the originator’s reporting system
ND3	Data collected on underlying exposure application but loaded onto a separate system from the originator’s reporting system
ND4-YYYY-MM-DD	Data collected but will only be available from YYYY-MM-DD (YYYY-MM-DD shall be completed)
ND5	Not applicable

15. With regard to **ABCP securitisations**, ESMA has taken note of market participants’ difficulties in obtaining information on underlying exposures that are securitised under ABCP transactions, due in part to pre-existing contractual arrangements between sponsors and originators that do not cover the provision of such information. As a result, ESMA has expanded the possibility for ‘No Data’ options to be used in the majority of fields relating to the ABCP underlying exposures templates. An additional 30 fields in the ABCP underlying exposures template (Annex 11 of the disclosures RTS) allow options ‘ND1-4’ as well as an additional 34 fields for the ‘ND5’ option to be used in that same template. ESMA has also adjusted the use of ‘No Data’ options for several fields under the control of the sponsor/originator in the ABCP investor report and significant event templates (Annexes 13 and 17 of the draft TS published on 22 August 2018). Overall, a total of 33 additional fields across all ABCP templates (Annexes 11, 13, 15, and 17 of the draft TS published on 22 August 2018) allow options ‘ND1-4’ to be entered, and ‘ND5’ may also be entered in 45 additional fields in those same templates.

16. ESMA also closely examined the fields in templates relating to **non-ABCP securitisations**, including the underlying exposure templates, as well as the investor report, inside information, and significant event templates. ESMA performed this examination taking into account feedback received on specific fields, from the perspective of ensuring the proportionality of its draft technical standards (in light of the Commission’s letter), as well as a desire to have as much consistency in the use of ‘No Data’ options across the templates as possible. As a result, ESMA also expanded the ability for reporting entities to use the ‘ND5’ option in 102 additional fields across the combined non-ABCP securitisation templates (i.e. Annexes 2-9, 13, 14, and 16, i.e. underlying exposures, investor report, inside information, and significant event templates, of the draft TS published on 22 August 2018). At the same time, ESMA notes that the non-ABCP template which is the most innovative (besides ABCP) is Annex 10 of the disclosures RTS, i.e. the Non Performing Exposures (NPE) add-on underlying exposures templates. In this template there is already extensive flexibility to use ‘No Data’ options throughout the templates for all fields not related to identifiers and the data cut-off date.

17. Where legitimate stakeholder concerns could not be addressed by the provision of further clarifications via Q&A or by changes to the field content (discussed in the next section), then ESMA also adjusted the ability to use the 'ND1-4' options, for a total of 120 fields across the underlying exposure templates. In this context, ESMA has paid particular attention to the use of the Corporate underlying exposures template (Annex 4 of the disclosures RTS), reflecting also the various uses of this template for different types of securitisations (i.e. including CLOs) and given also the wide variety of underlying exposure types (i.e. ranging from micro-firms to large corporates, at different stages of the firm lifecycle, and covering a range of sectors across the economy). Similar arrangements were made for the esoteric underlying exposures template in Annex 9 of the disclosures RTS (building off of the substantial flexibility already existing in this template).
18. Elsewhere, ESMA considered that a substantial amount of feedback received on the non-ABCP securitisation templates could be better addressed by either making some other adjustments to the fields themselves (discussed in the next section) or via the provision of additional guidance to market participants in the form of Q&As (also in relation to several issues affecting ABCP templates).

4.2 Other amendments to ESMA's draft securitisation disclosure technical standards

4.2.1 Specific amendments to template fields in ESMA's draft securitisation disclosure technical standards

19. In light of the Commission request to adjust the ability to use 'No Data' options in certain fields, ESMA considers that greater proportionality in these fields could be better introduced by making some adjustments to the content to report in certain fields. ESMA has accordingly drawn on feedback received from market participants and proposed some adjustments. Key examples of these include:
- (a) Adjusting fields relating to borrower employment status, in particular to cater for the possibility to complete the employment status fields where it is not known whether the employee is in the public or private sector. In this regard, ESMA has added an extra option ('employed – sector unknown'). This allows reporting entities to signal at least a minimum amount of useful information and, furthermore, reporting entities that do know the sector of borrower employment (e.g. public sector) could signal this as well, given that this is also a relevant factor for due diligence of underlying exposures;
 - (b) Changing how certain income-related fields (e.g. primary income, primary income type, and primary income currency) could be completed for corporate borrowers. This arises because legal entities can also borrow funds be the obligors for underlying exposures can indeed have legal entities borrowing (e.g. firms borrowing for their car fleet). As a result, ESMA has changed the content to report to specify that, for such obligors, financial revenue should be entered in the primary income field, and has also adjusted the primary income type fields to allow the obligor to clarify that they are a legal entity;
 - (c) Adjusting the calculation method for the 'current balance of the underlying exposure in arrears', following market feedback received that the initial calculation approach (which

involved providing the arrears balance excluding fees applied to the account) would lead to greater changes to their reporting systems than anticipated during the consultation stage.

- (d) Inserting consistent explanatory language on 'restructuring' in the Account Status and the Date Of Restructuring fields, as well as other fields that speak about 'restructuring' e.g. certain ABCP fields and the Credit Impaired Obligor fields⁵;
- (e) Adjusting the collateral sections of the residential real estate and commercial real estate underlying exposure templates to better capture information (in light of market feedback), which involved:
 - i. inserting a new field in the residential real estate and commercial real estate templates (collateral information sections) to capture the type of collateral;
 - ii. moving fields on the type of guarantor from the underlying exposure information sections to the collateral information sections, since these sections need to be completed anyway even for guarantees; and finally
 - iii. deleting some fields that were, as a result of these adjustments, duplicated and thus no longer necessary (amount guaranteed; type of additional collateral) from the underlying exposures information sections in the residential real estate and corporate templates
- (f) Providing further clarification where ND5 options can be used in the collateral fields (i.e. where the collateral is not a property item)

20. Moreover, ESMA also made further adjustments with a view to providing as much certainty for market participants as possible to ensure proportionality and a well-functioning securitisation market. This includes some adjustments to identifier fields used in the templates (e.g. more complete references to the disclosures RTS) and field formats. This also includes a more closely-adapted arrangement for risk retention signalling in ABCP securitisations and a more tailored set of tests/events/triggers fields in the respective investor report templates (e.g. adjustments to the field names).

4.2.2 Amendments to inside information and significant event information disclosures in ESMA's draft securitisation disclosure technical standards

21. ESMA also received some detailed requests for further guidance from the perspective of disclosure of inside information and significant event information. To recall, Article 7(1)(f) of the Securitisation Regulation concerns the reporting of any inside information relating to the securitisation that the originator, sponsor or SSPE is obliged to make public in accordance with the Market Abuse Regulation⁶ provisions on insider dealing and market manipulation. Article 7(1)(g) of the Securitisation Regulation concerns the reporting of any significant event "*where point (f) does not apply*".

⁵ the Account Status fields (RREL69; CREL136; CRPL79; AUTL70; CMRL55; CCDL37; LESL57; ESTL55), the Date Of Restructuring fields (RREL65; CREL8; CRPL75; AUTL66; CMRL51; CCDL33; LESL53); other fields that speak about 'restructuring' e.g. certain ABCP fields (IVAL39; IVSS26; IVAL42; IVAL46; IVAL40; IVAL41; IVAL43; IVAL45; IVAL48; IVAL47; IVAL49; IVAL44) and the Credit Impaired Obligor fields (RREL14; CRPL12; AUTL13; CMRL13; CCDL12; LESL12; ESTL14).

⁶ Regulation (EU) No 596/2014 of the European Parliament and of the Council

22. As a result, Article 7(1)(g) of the Regulation—and thus the obligation to report information relating to significant events—could be interpreted as applying where the securitisation is outside the scope of the inside information reporting obligations in the Market Abuse Regulation provisions on insider dealing and market manipulation. Indeed, ESMA is of the view that the distinction between Articles 7(1)(f) and 7(1)(g) of the Securitisation Regulation are intended to ensure that any securitisations falling outside the scope of application of the Market Abuse Regulation nevertheless have obligations to make available information on significant events.
23. As a result, the significant events reporting obligation in the Securitisation Regulation could be understood as constituting an alternative to the inside information reporting obligation—rather than the two being cumulative. However, the essence of the two reporting obligations are similar from the perspective of the needs of investors, potential investors, and the other data users listed in Article 17(1) of the Securitisation Regulation: the disclosure of information following an event that would be likely to materially impact the performance of the securitisation as well as have a significant effect on the prices of the tranches/bonds of the securitisation. In this regard, ESMA considers that changes to the underlying exposures and investor report information constitute such an event and that, in order to thoroughly update their assessments of the securitisation, investors, potential investors, and other entities listed in Article 17(1) of the Securitisation Regulation, require additional information in particular on the securitisation itself, the programme, the transaction, the tranches/bonds, the accounts, the counterparties, as well as additional features of relevance for synthetic and/or Collateralised Loan Obligation securitisations. For the avoidance of doubt, ESMA confirms once more that these reporting obligations are only expected of public securitisations⁷.
24. As a result, ESMA has made the following adjustments to the disclosures technical Standards:
- (a) The former Annexes 14 and 16 in the draft TS published on 22 August 2018 have been merged to a new Annex 14, covering inside information or significant event information for non-ABCP securitisation,
 - (b) The former Annexes 15 and 17 in the draft TS published on 22 August 2018 have been merged to a new Annex 15, covering inside information or significant event information for ABCP securitisation,
 - (c) In both of these new Annexes (Annexes 14 and 15), ESMA has added an ‘any other information’ section, with a view to permitting market participants to meet any specific further information requirements not captured elsewhere in these new Annexes, and
 - (d) Draft provisions in the draft TS published on 22 August 2018⁸ that required the reporting of significant event template upon the same time as the reporting of underlying

⁷ i.e. those securitisations where a prospectus has been drawn up in compliance with Directive 2003/71/EC of the European Parliament and of the Council

⁸ See Article 7(1) of the disclosures RTS published on 22 August 2018 (page 69 here: https://www.esma.europa.eu/sites/default/files/library/esma33-128-474_final_report_securitisation_disclosure_technical_standards.pdf).

exposures and investor report information have been moved to a redrafted recital⁹. The recital explains more clearly the link between, one on hand, the need for inside information or information on significant events to be up-to-date and, consequently, the need for this information to be provided at the same time as the underlying exposures and investor report templates. These adjustments allow a more comprehensive explanation for the motivation behind connecting the timing of this inside information and significant event reporting with the other reporting requirements, with a view to providing greater clarity to market participants (while also respecting the Commission's letter regarding proportionality).

25. To summarise these last paragraphs, market participants had requested greater clarity on the scope of these different reporting obligations under Article 7(1)(f) and 7(1)(g) of the Securitisation Regulation, and on the corresponding scope of application between the inside information and significant event information templates for ABCP and non-ABCP securitisations¹⁰. Rather than provide a Q&A, ESMA considered that adjusting the disclosures RTS with respect to these items would be the most effective route to address market concerns and achieve the intention of the Securitisation Regulation's transparency requirements (while also respecting the Commission's letter). In ESMA's view, the adjustments contained in these TS do not constitute a departure from the initial policy intention indicated in the Final Report, and neither increases nor reduces the information that was expected to be disclosed in the draft TS published on 22 August 2018. These adjustments have instead resulted in a more efficient set of disclosure TS. In addition, ESMA stands ready to provide further guidance in the form of Q&A as necessary on these points.

4.3 Additional feedback received on ESMA's draft securitisation disclosure technical standards

26. ESMA also continues to take note of market concerns on a number of higher-level issues, including:

- (a) Whether private securitisations are covered in the present disclosure requirements;
- (b) The geographic scope of application of these disclosure requirements; and
- (c) Transitional periods for these disclosure requirements.

27. ESMA considers that changes to the disclosure requirements with respect to these issues is still neither within its mandate, nor within the scope of the changes requested by the Commission.

⁹ See Recital 12 of the disclosures RTS published on 22 August 2018 (page 63 here: https://www.esma.europa.eu/sites/default/files/library/esma33-128-474_final_report_securitisation_disclosure_technical_standards.pdf). Recital 10 as published in the same RTS (page 62) has also been removed as it can be discussed and combined with the redrafted Recital 12.

¹⁰ Annexes 14 (non-ABCP inside information), 15 (ABCP inside information), 16 (non-ABCP significant event), and 17 (ABCP significant event) in the draft TS published on 22 August 2018, respectively

28. In particular, with respect to private securitisations, ESMA's opinion of its mandate within the Securitisation Regulation has been set out in its Final Report (see in particular section 2.2 therein).
29. Moreover, the geographic scope of application of these disclosure requirements, as well as other requirements in the Securitisation Regulation, are not a matter encapsulated within ESMA's disclosure-related mandates under Article 7 and 17. Nevertheless, ESMA will endeavour to work with the EBA, EIOPA, Commission, and other applicable public authorities, possibly via the Joint Committee Sub-Committee on Securitisation, with a view to providing further explanations and clarifications of the Securitisation Regulation's requirements, where possible.
30. Finally, with respect to the transitional period of these disclosure requirements, ESMA has also set out in its Final Report that its mandates do not encompass the ability to specify such a period in its TS, although paragraphs 18 and 19 of its Final Report do attempt to provide what could be an appropriate transitional period for these templates. ESMA understands the burden that this places on reporting entities and notes that some flexibility has been provided to reporting entities to prepare for the adoption of the disclosure templates. This includes the recent publication by the Joint Committee of a statement¹¹ regarding the application of the transitional disclosure requirements under the Securitisation Regulation. This also includes the greater flexibility provided by the present changes to the number of fields allowing 'No Data' options (ND1-4 or ND5) in the templates, discussed in the present Opinion.

4.4 Summary of changes to ESMA's draft securitisation disclosure technical standards

31. The adjustments discussed in the sections 4.1 and 4.2 above amount to a substantial number of changes that, in ESMA's view, are in line with the Commission's request. The majority of these changes are summarised in Table 2 below, which presents a breakdown by type of 'No Data' option (ND1-4 and ND5), as well as changes to the field content. The relatively greatest number of adjustments relate to the ABCP underlying exposures template, reflecting also the Commission's request. However, important adjustments have also been made in many of the other underlying exposure templates, as well as for the investor report and significant event templates. All in all, additional flexibility to use 'No Data' options has been introduced in 300 instances across the templates (allowing options ND1-4 to be used in 153 additional fields and option ND5 to be used in 147 additional fields¹²).
32. Nevertheless, with respect to the underlying exposure templates (Annexes 2-11 of the disclosures RTS), ESMA considers that there are other fields where it is essential that a

¹¹ https://esas-joint-committee.europa.eu/Publications/Statements/JC_Statement_Securitisation_CRA3_templates_plus_CRR2_final.pdf

¹² Note that there is overlap between these figures, i.e. some fields have been adjusted to allow both ND1-4 options and the ND5 option to be allowed where previously neither of these were possible, whereas in other instances only the ability to use options ND1-4 was changed (either because the field already accepted the ND5 option or because permitting the use of the ND5 option was deemed not meaningful) or, similarly, only the ability to use option ND5 was changed (either because the field already accepted the ND1-4 options or because permitting the use of the ND1-4 options was deemed not meaningful).

minimum amount of information is provided and, therefore, no tolerance be given for the 'No Data' options being used. The final column of Table 2 below demonstrates the small number of fields in this situation, relative to the total number of fields in each underlying exposure template (excluding identifiers and data cut-off date fields). These fields where no tolerance is provided refer to standard elements of any underlying exposure, which include:

- (a) The underlying exposure currency denomination
- (b) The performance of the underlying exposure, including the account status, arrears, and servicing status
- (c) Basic information on the type of collateral backing the underlying exposure (which must in any case only be provided where the exposure is collateralised, as per the provisions in the RTS)

Notes: Because some fields allow either ND1-4 or ND5 options to be entered (rather than only ND1-4 or only ND5), the 'Total No. of Fields' column is not equal to the sum of the '# fields allowing ND1-4 (Amended RTS)' and '# fields allowing ND5 (Amended RTS)' columns. See Annex 3 for a description of each 'No Data' option. The columns 'Total No. of Fields' and 'Fields where no ND options are allowed' both exclude identifier fields and data cut-off date fields. These are created

by the originator and do not refer to external or internal information to be collected by the originator. 'N/A' indicates that 'No Data' options ND1-4 are not allowed to be entered in any fields in these templates, as set out in the provisions of the RTS. This reflects the fact that information in these templates relates to aspects besides underlying exposures information (see paragraph 102 on pages 35-36 of ESMA's Final Report published on 22 August 2018 for further background).

Dear Mr Maijoor,

On 22 August 2018, pursuant to Regulation (EU) 2017/2402¹³, the European Securities and Markets Authority (ESMA) issued^{13 14} and submitted to the Commission draft regulatory technical standards specifying the information and the details of a securitisation to be made available by the originator, sponsor and securitisation special purpose entities, and implementing technical standards with regard to the format and standardised templates for making this information available.

While I appreciate the fact that ESMA submitted the final report on these technical standards nearly five months earlier than the established deadline, I would like to inform you that the Commission intends to endorse those draft regulatory and implementing technical standards only once certain amendments are introduced.

The Commission agrees with ESMA's approach in these technical standards, including the need to respect the principle of proportionality. However if not designed properly, these standards could place an excessive burden on the disclosing entity, since they represent the first instance of a comprehensive Union-wide disclosure regime for securitisations. In view of the sanctioning regime in case of non-compliance, disproportionately strict disclosure requirements risk disrupting securitisation issuance in the Union, which would run counter to the very objectives of the Securitisation Regulation.

Therefore, the Commission requests ESMA to examine whether, at the present juncture, the 'No Data' option could be available for additional fields of the draft templates. This would be particularly important for the templates for asset-backed commercial paper securitisations (for which there are no similar

harmonised disclosure templates currently in use). The Commission also requests ESMA to closely monitor the use of and need for these 'No Data' options in each template field, as part of its future contribution to the Joint Committee's report mandated in Article 44 of the Securitisation Regulation.

This element of proportionality is deemed essential to ensure a balance between, on the one hand, giving users the necessary available information and, on the other hand, promoting a well-functioning securitisation market in line with objectives of the Securitisation Regulation.

I draw your attention to the sixth subparagraph of Article 10(1) and the fifth subparagraph Article 15(1) of the Regulation (EU) No 1095/2010. According to these provisions, after the Commission informs ESMA that it intends to endorse a draft regulatory and implementing technical standards once the above-mentioned amendments are made, ESMA may amend the draft technical standards within 6 weeks on the basis of the Commission's rationale and resubmit them in the form of a formal opinion to the Commission.

Yours sincerely,

Draft

COMMISSION DELEGATED REGULATION (EU) .../..

of

supplementing Regulation (EU) 2017/2402 of the European Parliament and of the Council with regard to regulatory technical standards specifying the information and the details of a securitisation to be made available by the originator, sponsor and SSPE

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) 2017/2402 of the European Parliament and of the Council of 12 December 2017 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation, and amending Directives 2009/65/EC, 2009/138/EC and 2011/61/EU and Regulations (EC) No 1060/2009 and (EU) No 648/2012¹⁵, and in particular Articles 7(3) and 17(2)(a) thereof,

Whereas:

- (1) The provisions in this Regulation are closely linked, since they deal with the information of a securitisation that the originator, sponsor or SSPE of the securitisation shall make available to various parties. Whereas Article 7(3) refers to information on underlying exposures and investor reports to be made available, Article 17(2)(a) relates to making both this information available, as well as transaction documentation, inside information, and information on significant events. To ensure coherence between those provisions, which should enter into force at the same time, and to facilitate a comprehensive view and efficient access to all the relevant information of a securitisation, it is desirable to include these regulatory technical standards in a single Regulation.
- (2) The scope of Article 7(3) of Regulation (EU) 2017/2402 refers to all securitisations, including securitisations where a prospectus has been drawn up (commonly referred to as

¹⁵ OJ L 347, 28.12.2017, p. 35.

'public' securitisations) and securitisations where a prospectus has not been drawn up (commonly referred to as 'private' securitisations). Article 17(2)(a) of Regulation (EU) 2017/2402 refers to securitisations making information available via a securitisation repository, which does not include private securitisations. To reflect this distinction, this Regulation has been organised into separate sections specifying the information concerning all securitisations and the information concerning public securitisations only.

- (3) The scope of the information to be disclosed in accordance with this Regulation is driven by the need for securitisation potential investors and securitisation investors to respectively conduct due diligence and monitor a number of risks, including credit risks of the underlying exposures, and also model risk, legal risk, operational risk, counterparty risk, servicing risk, liquidity risk, and concentration risk. Similarly, the scope of the information to be disclosed should also enable the entities listed in Article 17(1) of Regulation (EU) 2017/2402 to meet their respective mandates, including monitoring the overall functioning of securitisation markets, as well as trends in underlying asset pools, securitisation structures, interconnectedness among counterparties, and the role of securitisation in the broader EU macro-financial landscape.
- (4) The term 'underlying exposure' is generally understood to refer to any loan, lease, debt, credit, or other cash-flow generating receivable. Securitisations accommodate many types of underlying exposures. This Regulation sets out tailored reporting requirements for the most prominent underlying exposure types in the Union, reflecting both outstanding amounts and presence across geographies. A specific Annex is provided for the so-called 'esoteric' underlying exposures that do not conform to the most prominent types.
- (5) An underlying exposure type may on occasion fall under several possible Annexes. In line with current market practice, information on a pool of underlying exposures that is comprised entirely of automobile underlying exposures should be reported using the Auto underlying exposure Annex in this Regulation, regardless of whether the underlying automobile underlying exposures are loans or leases. Information on a pool of underlying exposures where the underlying exposures are entirely leases should be reported using the Leasing underlying exposure Annex in this Regulation, unless the pool of underlying exposures is comprised entirely of automobile leases, in which case the Auto underlying exposure Annex in this Regulation should be used to report information.
- (6) In order to reflect as closely as possible existing templates for disclosures of certain information, certain terms and practices have been derived or inspired from the existing *acquis*. Terms regarding lending to residential and commercial real estate have been derived from Recommendation ESRB/2016/14 of the European Systemic Risk Board¹⁶. In line with this Recommendation, a property that has a mixed commercial real estate and residential real estate use should be considered as different properties (based for example on the surface areas dedicated to each use) whenever it is feasible to make such breakdown; otherwise, the property should be classified according to its dominant use. Terms relating to micro, small, and medium-sized enterprises have been derived from the

¹⁶ Recommendation of the European Systemic Risk Board of 31 October 2016 on closing real estate data gaps (ESRB/2016/14), OJ C 31, 31.1.2017, p. 1.

Commission Recommendation (2003/361/EC)¹⁷. Terms relating to automobile, consumer, credit card, and leasing underlying exposures have been derived or inspired from Commission Delegated Regulation (EU) 2015/3¹⁸.

- (7) The granularity of the information to be disclosed for non-ABCP securitisation underlying exposures reflects the loan/lease-level depth used in existing disclosure and data collection provisions. Disaggregated underlying exposure-level data is valuable for securitisation investors, potential investors, competent authorities and, for public securitisations, the other entities listed in Article 17 of Regulation (EU) 2017/2402 seeking to adequately understand and monitor the risk and performance of securitisation underlying exposures. Furthermore, disaggregated underlying exposure-level data constitutes a key pillar supporting the restoration of confidence in securitisation markets. As regards ABCP, both the short-term nature of the liabilities and the presence of additional forms of support beyond underlying exposures reduce the need for loan/lease-level data.
- (8) It is important to maintain a minimum transparency on the evolution of securitisation pools of underlying exposures. However, it is less useful for investors, potential investors, competent authorities and, for public securitisations, the other entities listed in Article 17(1) of Regulation (EU) 2017/2402, to continue receiving information on 'inactive' exposures, because these no longer contribute to the risk profile of the securitisation, such as loans that have defaulted with no further recoveries expected or that have been redeemed, prepaid, cancelled, repurchased or substituted. Therefore, it is appropriate for information on these inactive exposures to be reported only once, in order to allow transparency on their transition from an 'active' to 'inactive' status, but to no longer be reported thereafter.
- (9) Information to be made available under Article 7(1) of Regulation (EU) 2017/2402 may include a substantial number and variety of documentation and items. In order to facilitate the tracking of this documentation, this Regulation prescribes a set of item codes to be used by the originator, sponsor, or SSPE when making information available to a securitisation repository.
- (10) Securitisations are complex instruments with multiple aspects to be reported. In order to follow best practices for reporting requirements, it is essential that standardised identifiers be assigned in order to facilitate the ability of investors, potential investors, competent authorities and, for public securitisations, the other entities listed in Article 17(1) of Regulation (EU) 2017/2402 to track information across different categories of information pertaining to the securitisation. Furthermore, to allow monitoring of the evolution of securitisation information over time, those standardised identifiers should be unique and permanent, for example both during and after restructurings of the securitisation; modifications to the transaction documentation; changes in the composition of the

underlying exposures involving repurchases, substitutions or replenishments; and withdrawal of the securitisation from reporting to a securitisation repository.

- (11) In order to fulfil the needs of investors, potential investors, competent authorities and, for public securitisations, the other entities listed in Article 17(1) of Regulation (EU) 2017/2402, it is essential that information made available to them is both complete and consistent. Given the complexity of securitisations, a change in the risk characteristics of the underlying exposures, in the aggregated cash flows generated by these underlying exposures, or in other information set out in the investor report, are events that can materially impact the performance of the securitisation as well as have a significant effect on the prices of the tranches/bonds of the securitisation. In order to update their holistic assessments of the securitisation following these events, investors, potential investors, competent authorities and the other entities listed in Article 17(1) of Regulation (EU) 2017/2402 require additional information in particular on the securitisation itself, the programme, the transaction, the tranches/bonds, the accounts, the counterparties, as well as additional features of relevance for synthetic and/or Collateralised Loan Obligation securitisations. Therefore, it is appropriate for this information to be specified as part of the information to be made available under Article 7(1)(f) or (g) of Regulation (EU) 2017/2402 with regard to public securitisations. It is also important for this information to be up-to-date. An appropriate way to achieve this would be to make inside information or significant event information available at the moment in which information on underlying exposures and investor report is made available via a securitisation repository.
- (12) There may be specific cases at a given point in time where information cannot be made available. In such situations, the originator, sponsor, or SSPE should be allowed to signal and explain, in a standardised manner, the specific reason preventing data from being reported. The set of 'No data' options developed for this purpose reflects existing practices for disclosures of securitisation information. These 'No data' options should be permitted to be entered primarily for specific fields relating to underlying exposures information and any aggregates derived from that information. In contrast, information on the remainder of the securitisation pertains to aggregated items or structural features for which there are no legitimate reasons why information should not be available.
- (13) The set of 'No data' options from ND1 to ND4 is meant to signal legitimate cases of information not being available and under no circumstance should constitute an exemption from reporting requirements. Furthermore, use of these options in reporting underlying exposures information in a given securitisation is expected to be limited and, where present, to converge quickly towards reporting of the relevant information. At the same time, due to the heterogeneity of securitisation instruments, it is possible that a specific reporting item, in any of the categories of information mentioned in this Regulation, may not be applicable or relevant for the securitisation. In such cases, it should be possible for this situation to be reflected as such in the data submission for that specific reporting item using a specific option.
- (14) It is equally important that due diligence, monitoring, and other activities be based on information that is sufficiently representative of the current situation of the securitisation transaction. The data cut-off date provisions reflect existing practices for disclosures of securitisation information and seek to ensure that information being made available references a time period that is close to the date of submission, with due regard for the

operational steps needed by the originator, sponsor, or SSPE to organise and submit such information.

- (15) This Regulation is based on the draft regulatory technical standards submitted by European Securities and Markets Authority (ESMA) to the Commission.
- (16) ESMA has conducted open public consultation on the draft regulatory technical standards on which this Regulation is based, analysed the potential related costs and benefits and requested the opinion of the Securities and Markets Stakeholder Group established by Article 37 of Regulation (EU) No 1095/2010 of the European Parliament and of the Council¹⁹,

HAS ADOPTED THIS REGULATION:

5.3 Annex III: Revised draft implementing technical standards with regard to the format and standardised templates for making available information and details of a securitisation by the originator, sponsor and SSPE

Draft

COMMISSION IMPLEMENTING REGULATION (EU) .../..

of

laying down implementing technical standards with regard to the format and standardised templates for making available information and details of a securitisation by the originator, sponsor and SSPE

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) 2017/2402 of the European Parliament and of the Council of 12 December 2017 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation, and amending Directives 2009/65/EC, 2009/138/EC and 2011/61/EU and Regulations (EC) No 1060/2009 and (EU) No 648/2012²⁷, and in particular Articles 7(4) and 17(3) thereof,

Whereas:

(1) The provisions in this Regulation are closely linked, since they deal with the format of the information of a securitisation that the originator, sponsor or SSPE of the securitisation shall make available to various parties. Whereas Article 7(4) refers to the format of the information on underlying exposures and investor reports to be made available, Article 17(3) relates to the format of both this information, as well as transaction documentation, inside information, and information on significant events. To ensure coherence between those provisions, which should enter into force at the same time, and to facilitate a

²⁷ OJ L 347, 28.12.2017, p. 35.

comprehensive view and efficient access to all the relevant information of a securitisation, it is desirable to include these implementing technical standards in a single Regulation.

- (2) The scope of Article 7(4) of Regulation (EU) 2017/2402 refers to all securitisations, including securitisations where a prospectus has been drawn up (commonly referred to as 'public' securitisations) and securitisations where a prospectus has not been drawn up (commonly referred to as 'private' securitisations). Article 17(3) of Regulation (EU) 2017/2402 refers to securitisations making information available via a securitisation repository, which does not include private securitisations. To reflect this distinction, this Regulation has been organised into separate sections specifying the information concerning all securitisations and the information concerning public securitisations only.
- (3) The complex and heterogeneous nature of securitisations implies that the information made available should be set out in a harmonised format to allow for efficient data collection and assessment by investors, potential investors, competent authorities and, for public securitisations, the other entities listed in Article 17(1) of Regulation (EU) 2017/2402. In addition, where the information is required to be made available via a securitisation repository, the provision of information in a harmonised format helps ensure seamless subsequent aggregation and comparison across repositories.
- (4) In order to minimise costs for market participants, the reporting format should also be consistent, to the extent feasible, with that prescribed for the reporting of derivatives contracts under Article 9 of Regulation (EU) No 648/2012 of the European Parliament and of the Council²⁸ and Article 4 of Regulation (EU) No 2015/2365 of the European Parliament and of the Council²⁹. Furthermore, where information is made available via a securitisation repository, the reporting format should also take into account solutions developed by existing data collectors. This Regulation therefore prescribes the format for each of the fields to be reported in accordance with XML, which is used in the financial industry in particular for reporting information on loans and other similar underlying exposures.
- (5) This Regulation is based on the draft implementing technical standards submitted by the European Securities and Markets Authority (ESMA) to the Commission.
- (6) ESMA has conducted an open public consultation on the draft implementing technical standards on which this Regulation is based, analysed the potential related costs and benefits and requested the opinion of the Securities and Markets Stakeholder Group established by Article 37 of Regulation (EU) No 1095/2010³⁰,

HAS ADOPTED THIS REGULATION

²⁹ Regulation (EU) 2015/2365 of the European Parliament and of the Council of 25 November 2015 on transparency of securities financing transactions and of reuse and amending Regulation (EU) No 648/2012, OJ L 337, 23.12.2015, p. 1.

³⁰ Regulation (EU) No 1095/2010 of the European Parliament and of the Council of 24 November 2010 establishing a European Supervisory Authority (European Securities and Markets Authority), amending Decision No 716/2009/EC and repealing Commission Decision 2009/77/EC, OJ L 331, 15.12.2010, p. 84.
